Expense ratio*	25.0%		26.5%
Combined loss/expense ratio*	108.3%		109.6%

*excluding life and health reinsurance

Dear shareholders, Ladies and Gentlemen,

With this annual financial statement I am delighted to be able to present to you another record result – the fifth in succession. We are especially proud of this performance because in the year under review we have again succeeded in achieving our profit targets despite particularly difficult market conditions in our largest strategic segment, property and casualty reinsurance.

We have now fully transformed our annual report for the Hannover Re Group to comply with US GAAP (Generally Accepted Accounting Principles). This changeover will also require you to familiarise yourself with a number of innovations and special features. A package of measures is intended to render the transition as smooth as possible for you (we began to publish reconciliations of the German accounts in accordance with US GAAP two years ago). We have retained the previous reporting structure wherever possible and we have expanded the glossary at the end of this report to include various items of specific terminology. Furthermore, we have endeavoured to provide supporting explanations in the text. Nevertheless, if you have any criticisms to raise or any suggestions for improvements then please let me know. We are extremely keen to continually enhance the quality of our financial communications.

The changeover to US GAAP necessitates two additional components which I consider to be particularly important and to which I would like to draw your attention. In the segment report, we are publishing for the first time the business results for each of our individual strategic segments right up to and including the after-tax result. The annual report also comprises – again for the first time – a cash flow statement. It is by no means easy to interpret such an analysis in the case of a reinsurance company, partly because of the high volume of reserves. Nevertheless, in my view both these instruments offer fresh insights, the informative power of which we wish to further enhance in the future.

Our Group profit after tax showed a further increase, rising by 18% to EUR 202 million. This gives rise to earnings per share of EUR 6.86, a figure which is also 18% higher than in the previous year. We shall propose to the Annual General Meeting that the dividend payment be increased again. In my opinion, these "bare figures" already speak for themselves. Yet they do not reveal that this performance could only be achieved thanks to the systematic strategy of diversification which we have pursued over recent years.

Just ten years ago our activities were restricted virtually exclusively to property and casualty reinsurance, and we pursued a corporate "monoculture". Today, the result rests on four pillars, all of them sound and independent, albeit of varying dimensions. Life and health reinsurance continues to be our most significant growth area; the new method of financial reporting clearly reveals the profit potential inherent in this segment. The high, value-creating investments of recent years can now – at least to some extent – be appropriately reflected in the balance sheet. Combined with our voluntary additional data on the value of the in-force treaty portfolio, it is now apparent that this business – which always had to be shown as loss-making under German accounting regulations – is in reality pleasingly profitable.

Financial reinsurance, which we transact from the International Financial Services Centre in Dublin, continues to record above-average growth and generates solid profits.

During the past year we did not always find it easy to explain the reasons for our entry into a fourth strategic segment, namely program business. This US niche segment is relatively unknown and is governed by its own rules and practices. We are nonetheless convinced that we shall succeed in exporting this American business model to other markets on a greater scale than has hitherto been the case. Clarendon Insurance Group, whose figures have been included in our annual financial statement for the first time, has not only lived up to our expectations – it has surpassed them by a generous margin:

in only the first year after our investment it has generated a substantial contribution to the Group operating result. This confirms that our decision to enter the program business segment was correct and that in Clarendon we have acquired one of the best "program writers". This new member of our corporate family has now been very well integrated into the Hannover Re Group.

In property and casualty reinsurance, which remains our most significant but also our most difficult business segment, the year under review produced substantially above-average losses from natural catastrophes and other major loss events for the second time in succession. The reinsurance industry will play a major role in compensating the material damage resulting from the Sydney hailstorm, the earthquakes in Turkey, Greece and Taiwan, typhoon "Bart" in Japan, winter storms in western Europe as well as numerous plane crashes and a large number of other major losses. However, these dramatic events have also caused certain providers with aggressive pricing policies to disappear from the market and have generally brought about a more realistic assessment of the risks. The downward slide in premium rates and the deterioration in terms and conditions have certainly come to an end, and towards the close of the year under review initial improvements in terms were already observed in some of our markets.

The Federal Government and its tax plans subjected the German insurance industry to a roller-coaster ride during the past year. In the first place, the discussions surrounding the structure of the so-called Tax Relief Act (which are still ongoing) provoked further negative headlines and also placed a sustained strain on the share prices of listed companies. The announcement of tax exemption for profits on the sale of participations then provided some good news at year-end. Those companies with large portfolios of equity interests, in particular, were also able to turn this development to their advantage on the stock markets. Yet this regulation too is still under debate, thereby adding to the uncertainty affecting the general framework under which businesses currently have to take decisions. It is very much my hope that at least the presently discernible positive indications of a reduction in the tax burden carried by German companies will be systematically implemented.

"(German) private investors have discovered shares as an investment vehicle! But not yet those of Hannover Re!" – this could be a headline describing the disappointing development of our share price performance. Following the surging trend from mid-1996 to mid-1998, the year under review closed with a marked price decline, despite continuous growth in our premium income and profit. We have enshrined in our corporate strategy the goal of enhancing the value of the company through a sustained, favourable profit trend. Looking at the performance of our share price, however, the opposite would appear to be the case. Many different concepts exist for measuring the development of a company's value. What most of them have in common is that they are based upon expectations of future profits – specifically, those profits over and above the costs of capital. According to this definition, the value of your company also increased in the year under review. Why has the stock market failed to give this due credit? There are several answers to this question, and their relative significance is difficult to assess. Reinsurance is frequently associated solely with property and casualty reinsurance, a segment which is currently suffering under a fiercely competitive climate and pressure on profits. Lawmakers in Germany inflicted additional damage on the insurance industry with their general tax framework and subsequently only partially made good this discrimination. During the past year investors invested very heavily in international indices and "blue chips" while neglecting second-tier stocks. Yet the most significant factor is that the various "New Markets" with TMT (technology/media/telecommunications) stocks generated a sense of euphoria which could not be justified on the basis of fundamentals.

Whatever the case may be, I am firmly convinced that – sooner or later – the stock markets too will reawaken to the value of fundamentally solid companies and that our share will profit from this development. This view is shared by numerous financial analysts, both in Germany and the international arena. Our task remains the continuing creation of favourable earnings prospects and the energetic communication of this fact. Given the current developments to date, and far more importantly the

systematic approach with which we are pursuing our strategic objectives, I am highly optimistic that we can fulfil this task.

On behalf of my colleagues on the Executive Board and myself, I would like to thank our shareholders for their confidence in our company. I give my assurance that we shall live up to this trust and we shall not slacken in our efforts to unceasingly enhance the value of your company. It is merely a question of time before our successes are again reflected in rising share prices.

Yours sincerely,

A handwritten signature in blue ink, appearing to read 'Wilhelm Zeller', written in a cursive style.

Wilhelm Zeller

Controlling and Information (Planning/Controlling, Investor Relations, Public Relations, Internal Auditing), Underwriting Service and Controlling, Corporate Development.

The "gold-digger" mood currently prevailing on the markets should not disguise the fact that shares are a long-term investment instrument. Sooner or later stock prices will again be determined by fundamentals such as profitability, strategic positioning and an enterprise's approach to value enhancement. Companies which are guided by these considerations will be successful in the long term.

Dr. Andreas-Peter Hecker

Non-life Reinsurance of the HDI Group, Retrocessions, Human Resources, Facility Management.

As a successfully expanding company we are constantly in search of new staff. The availability of the required specialists in Germany is limited. For this reason, we are stepping up our search for such employees abroad, too. We now employ foreign staff from 29 countries at our Hannover head office. We find the relevant authorities highly cooperative when it comes to issuing the necessary work and residence permits. We therefore have no cause to participate in the current discussion about the launch of a "Green Card" in Germany.

Dr. Wolf Becke

Life and Health Reinsurance worldwide.

The launch of Hannover Life Re as a global brand name will continue to enhance the value of our successful, international business model through the provision of customized solutions in the area of "stochastic banking", the opening up of new markets by way of product partnerships and not least via our entry into conventional reinsurance programmes.

Jürgen Gräber

Property and Casualty Reinsurance in English-speaking Africa, Asia and Australasia, Facultative Reinsurance worldwide, Aviation, Space and Marine business worldwide, Financial Reinsurance.

The years 1998 and 1999 show the anticipated unsatisfactory results scenario of those reinsurers who neglected to conduct technical discussions with their clients in the previous years and instead set greater store by their market share. We are looking forward to the considerable challenges offered by the resumption of such technical discussions and we are pleased to place our expertise at the service of our clients – who also in previous years entrusted us with exposures sometimes running into billions – with a view to developing both traditional and alternative reinsurance solutions.

Herbert K. Haas

Finance and Accounting, Capital Markets, Information Technology.

Just as in other branches of industry, the Internet will significantly impact the business processes of reinsurers, especially with regard to accounting and payment transactions with clients, and will lead to more rapid and efficient processes in asset management.

Udo Schubach

Property and Casualty Reinsurance in Germany (shareholders of E+S Rück), Austria and Switzerland, Credit and Surety worldwide.

The forward-looking insurance industry experienced a massive structural transformation in the nineties which will acquire even greater impetus in the new decade. With the aid of sophisticated, highly specialized risk analysis systems we help our clients to identify the changing hazards faced by their company and assist with the design of the necessary reinsurance protection.

Dr. Detlef Steiner

Property and Casualty Reinsurance in North America, European Romance, Latin American and Arab countries, Northern and Eastern Europe, the United Kingdom and Ireland, Program business.

New technologies such as the Internet, intranets etc., will significantly change the value-added chain from the policyholder right down to the retrocessionaire. In this regard, the outsourcing of numerous functions will improve the efficiency of the process and trigger a structural change in the insurance industry.

Dr. Michael Pickel

Property and Casualty Reinsurance in Germany (Open Market), Claims Services, Legal Department.

Only those companies which are quick to draw their conclusions from facts can emerge victorious in the fiercely competitive insurance environment. This is why we support our business partners with our international know-how in the field of risk analysis. Drawing on our expertise in (major) claims handling, we strive to limit claims already occurred and pinpoint emerging medium-term trends on the claims front.

Stock markets continued to boom ...

The impacts of the 1998 financial crisis could still be felt at the beginning of 1999. Yet the excellent state of the US economy, the revival in Euroland and Japan and the surprisingly rapid recovery in Asia and South America counteracted the threatened deflation and made possible another year of far above-average price gains on the international stock markets. As at year-end share prices climbed to new record highs all across Europe, in the USA and even more markedly in developing countries. Cyclical stocks especially benefited from this boom. The extremely low interest rates on the bond markets fostered this development in two ways: institutional investors reallocated liquidity to the more lucrative stock markets, while traditionally conservative private investors discovered stocks as a new investment alternative. With their concentration

on high-growth technology and Internet stocks, the "New Markets", in particular, profited from this development on an undreamt-of scale.

The Euroland index – the Euro Stoxx 50 – ended the year with growth of 47% at 4,904 points. The Dax, which for a long period was unable to keep pace with the upward movement of the other European markets, closed with a plus of 39% at 6,958 points, also a new record high. In the USA the Dow Jones Index recorded an outstanding performance of +26%. 1999 was thus the fourth successive year in the USA with price gains in excess of the historical average, following 18% in 1998, 23% in 1997 and 26% in 1996.

... but insurance stocks were still under pressure.

Both in Germany and internationally, insurance stocks were largely neglected by this rally. The mid-caps and small-caps which are not represented in the major indices suffered particularly heavily. Due to its weighting, the German CDax for insurance stocks showed a somewhat distorted pattern. Owing to the Federal Government's plans to grant tax-exempt status to sales of equity participations, the German market leaders in insurance and reinsurance – who account for more than 85% of the development of this index – were able to post strong gains just prior to the end of the year under review. Yet with a plus of merely 12% the CDax for insurance stocks also showed a comparatively poor performance.

What were the reasons for this development? The insurance industry as a whole was detrimentally affected by the uncertainty surrounding the possible consequences of the new millennium. It was virtually impossible to predict the losses which a worldwide disaster might have

caused in this regard. As an additional factor, property and casualty (re-)insurance worldwide was affected by unsatisfactory terms and conditions attributable to the sometimes ill-judged competitive environment, thereby leaving it open to question whether appropriate profits and returns on equity could be attained. Investors' clear focus on the growth stocks in the New Market as well as the highly liquid Dax and Euro Stoxx stocks caused mid-cap and small-cap financials to be neglected. Furthermore, most notably among foreign investors, the debate surrounding the Federal Government's tax reform (which is still ongoing) led to uncertainty, not least because the insurance industry is earmarked as one of the main sources of funding for the so-called Tax Relief Act.

The Hannover Re share was disappointing ...

The price trend of the Hannover Re share should be seen against this backdrop. In the 1999 stock market year it in no way reflected the favourable development of our Group. The share lost 16%

of its value, despite the fact that at year-end we had already announced the fifth record year in succession in our semi-annual report.

Price development of the Hannover Re share and volume since stock exchange listing

... but fundamentally offers considerable potential.

We countered the market developments, which are scarcely within our power to influence, with positive growth in our most important parameters: the profit before and after tax, the earnings per share, the dividend and the return on the equity invested in our company. Thanks to our strict profit orientation, we again succeeded – despite sometimes difficult market circumstances – in increasing these performance ratios by double-digit margins. The earnings per share rose by 18% from EUR 5.83 to EUR 6.86. We implement highly purposeful asset management in order to optimally structure the return on equity, and in addition to stockholders' equity we use long-term outside capital as well as the

securitisation of reinsurance risks as equity substitutes. We allocate the required stockholders' equity to our business segments on a source-related basis using a scientifically grounded model. We thus always measure the results of our individual market sectors in the light of the costs of capital which they have caused – a method which promotes the value-orientated management of our Group and fosters a long-term, sustained increase in the value of the company. The fruits of this economical husbanding of our stockholders' funds are attractive returns on equity. At 24% before and 17% after tax we were even successful in again surpassing our profit target.

Intensified Investor Relations activities will help realise this potential ...

A major factor is the continuous communication of our business policy objectives and their degree of fulfilment. With this in mind, we have further stepped up our Investor Relations activities. Our presence at investor forums and trade fairs as well as individual discussions with institutional investors (so-called "roadshows") have helped to present our share as an interesting investment; these activities encompass all European financial centres and North America. During the past business year the number of visits which we received in Hannover from institutional investors and international financial analysts has more than doubled.

The changeover to US GAAP for the 1999 annual financial statement, which we had already implemented in our interim report, enhances transparency and also improves the international comparability of our results for analysts and investors.

In January 2000 the German Panel on Corporate Governance drew up guidelines in accordance with the "Code of Best Practice" for companies

listed on the stock exchange. Major components of these principles, the purpose of which is to "achieve a responsible, value-oriented management and control of companies", already form part of day-to-day practice within our company. We have completed our risk management system and publish our business results in accordance with international standards (US GAAP), which currently also include a segment report.

Corporate information is published on the basis of clearly defined internal publication guidelines. By way of our regular press releases, newsletters and telephone conferences as well as the constant updating of our Internet pages, we avoid any possibility of selective disclosure. We have already initiated concrete steps to implement all the other principles drawn up by the aforementioned Panel on Corporate Governance, with the result that we shall shortly be in full compliance with its recommendations.

... and promote a favourable price trend in the current year.

For as long as it remains possible and advantageous from the tax standpoint, we shall continue to adhere to our shareholder-friendly policy of distributing the operating profit of the parent company to its shareholders. We shall therefore propose to the Annual General Meeting that it approve a 33.5% increase in the gross dividend to EUR 2.91 per fully paid-up no-par value share. Based on the price as at 30. December 1999, this produces a dividend yield of 3.8%. We also intend to ask our owners at the Annual General Meeting to approve the changeover to registered shares, thereby facilitating a uniform capital structure. As part of this changeover process, all remaining Hannover Re shares are to be admitted for trading so as to boost our significance in the relevant indices. With detailed knowledge of our shareholder structure, we shall be able to address all our owners directly, create system-

atic transparency and implement all Investor Relations measures considerably more efficiently. We shall continue to profile our company at various national and international events and organise roadshows at the major domestic and foreign financial marketplaces, and we shall visit investors and financial analysts and invite them to visit us in Hannover.

All these activities are driven by a single goal, namely to present our share to investors as an attractive investment, stimulate demand and thereby restore the share price to an appropriate level.

The opinions of our analysts:

"With a degree of openness which is unparalleled in the sector and by way of clearly defined objectives, the management strives to render the company and its risks transparent for investors."

Lars Niggeling, Andreas Frick; Vontobel,
14 April 2000

"Hannover Re is a unique company in its commitment to transparency and shareholder value."

Michael Huttner, Susan Holliday; JP Morgan,
March 2000

"Full conversion to US GAAP is revealing the company's earnings strength, giving it an attractive PER."

Daniela Heyduck; HypoVereinsbank,
25 February 2000

"Specialisation on niches gives Hannover Re a wider basis and leads to better diversification."

Marc Thiele; West LB Panmure,
30 November 1999

"As property/casualty reinsurance continues to suffer from considerable over-capacity and fierce competition in some areas, Hannover Re continues to be very selective."

Karlos van Endert; Commerzbank Global Equities,
26 November 1999

"In our strategic analysis the key strengths we identify for the group are: intellectual capital, diversification and low cost of production."

Sylvia Wurl-Aydilek, Richard Hewitt, Jonathan Lawlor; Dresdner Kleinwort Benson,
October 1999

"Hannover Re is among the best in our sector at managing its capital base."

Brian Shea; Salomon Smith Barney,
21 September 1999

"Hannover Re's development strategy is focused on specialised niches. Margins are protected in these branches and do not require much shareholders' funds."

Jean d'Herbecourt, Séverine Piquet; CCF Securities,
June 1999

"The ideal vehicle to play specialty reinsurance. Hannover Re is the most diversified of the mid-sized insurers and has the widest international reach."

Valérie Bompard, Jean-Christian Huard; Société Générale,
November 1999

Economic climate

The global economy continued to show moderate growth in 1999, and fears of the eruption of new crises or indeed of a global recession thus proved unfounded. Advancement in developing countries also contributed to worldwide growth. In some regions this has already led to inflationary fears, a tighter monetary policy and rising interest rate levels.

After four years of strong growth and a discernible upswing in prices, economic policy in the United States, in particular, focused on the risks of inflation and sought to prevent the economy from overheating through interest rate rises. Japan also continued to recover, although – in contrast to the USA – government measures here sought to set in motion a far-reaching revival by way of public-sector demand and an easing in monetary policy. In western Europe, too, the state of the economy picked up appreciably, albeit with marked regional differences. Foreign trade in Euroland profited from the weakness of the Euro, whereas those industries which rely on imports suffered under higher prices; crude oil prices especially contributed to the upward price trend. Asia clearly continued to rebound following the economic crisis, and both Latin America and eastern Europe developed favourably due to increased exports. The German economy displayed below-average vigour, only beginning to gather impetus in the summer. Here, too, the demand for exports due to the weakness of the Euro was a contributing factor.

In the financial markets stocks and bonds moved in quite contrary directions in 1999. Once initial fears of interest rate rises had been overcome and private investors finally discovered shares as a lucrative investment, prices climbed sharply. The Euroland index – the Euro Stoxx 50 – gained an impressive 47%, for example. Against this general backdrop, increases in the value of technology stocks were at times on a euphoric scale. Bond markets, on the other hand, suffered heavily under the interest rate rises which subsequently ensued as the year progressed. The interest on 10-year German federal government bonds alone increased by

1.7% in January. In addition, considerable liquidity flowed out of the bond markets due to the stock market boom. Overall, major investors with their typically diversified holdings achieved consistently favourable earnings, supported largely by realised gains on equity portfolios.

In the insurance and reinsurance industries the developed markets remained sluggish, or at best posted moderate growth; developing countries, however, again generated above-average increases in premium income. Life and health insurance achieved markedly stronger growth worldwide due to more exacting demands on private provision for old age and medical care. Although the trend towards concentration eased slightly, markets again witnessed a considerable number of mergers and acquisitions – especially involving the major insurance companies. The situation among the "global players" in the reinsurance sector appears to have stabilised; acquisitions tended to affect smaller regional companies or those specialising in particular classes of business.

Throughout virtually the entire insurance industry the year under review was marked by continued over-capacity, which kept competition at an intense level. Competitive pressure and battles for market share were particularly prevalent in property and casualty reinsurance, most notably in those markets dominated by standard products and mass business. Organic growth was minimal in such cases.

The overall development of property and casualty (re-)insurance was further characterised by the high number of natural catastrophe losses. Insured losses from such events – especially earthquakes and storms – almost reached historic dimensions. Only in 1992 was the burden of losses higher. At a very late stage of the year the winter storms in Europe, which in some cases led to almost inconceivable loss scenarios, caused the overall situation to deteriorate even further. Following several years of below-average loss incidences, two consecutive years have now generated losses on such a scale as to lead to more realistic risk assess-

ment market-wide and which clearly demonstrate the urgent need for appropriate rate adjustments.

Due in part to the initiative taken by lawmakers and supervisory authorities, the development of professional risk management gained in significance around the world, particularly at insurance companies. For reinsurers this means, not least, that their credit status will assume growing importance as a competitive factor. The independent rating agencies serve as the essential yardstick here, and their rating instruments now exert a direct influence on company policies. Yet the need for the

strongest possible equity base contradicts the expectations of owners, who demand the most economical use possible of their funds and a high return on equity. This may lead to a conflict of interests, creating the need for rating agencies to further develop their methods. Particularly in the case of reinsurers, the development of comprehensive risk management systems offers an opportunity to design new products and show off their expertise to best advantage.

Business development

The presentation of our 1999 annual financial statement marks the changeover to the American accounting standard US GAAP (United States Generally Accepted Accounting Principles). This entails a number of significant changes, to which we shall make specific reference below. In order to facilitate a full comparison with the previous year, we have restated the 1998 figures in accordance with US GAAP. Key new features relate, inter alia, to:

- the structure of the balance sheet and the statement of income,
- reporting according to segment,
- the compilation of a cash flow statement,
- the expansion of the scope of consolidation,
- changes in the determination of income and the valuation of assets and liabilities, and
- the elimination of the equalisation reserve.

We achieved our fifth successive record result in the 1999 financial year. The consolidated net income and the earnings per share both increased by 18%, rising from EUR 171 million to EUR 202 million and from EUR 5.83 to EUR 6.86 respectively.

Gross premium income recorded impressive growth of 49% to reach EUR 6.7 billion. Of this, 30 percentage points were attributable to the initial consolidation of Clarendon Insurance Group, New York. Additionally, approximately 7 percentage points of the gross premium growth were due to exchange rate factors, since virtually all the major currencies gained in value against the Euro. Organic growth nevertheless accounted for an increase of 12 percentage points. Under difficult market conditions we thus posted stronger growth than the market as a whole, without sacrificing profitability. Particularly due to Clarendon's high degree of reinsurance, the increase in net premium was below average. However, in the year under review we again utilised our innovative securitisation instruments and transferred pre-financing costs from life and health reinsurance to the capital markets, thereby causing our re-

tention to decrease in this segment too. Despite this, net premium earned increased by 18%.

In addition to Clarendon, the greatest growth impulse was provided by life and health reinsurance business, although financial reinsurance also recorded considerably above-average growth of 38%. Premium income in traditional property and casualty reinsurance business, on the other hand, declined. In the light of the intense competition in this segment we purposefully refrained from expanding our business volume and concentrated on profitable client relationships.

The Clarendon Insurance Group (and hence the new business segment "program business") constitutes a major element of this annual financial statement. Included in our consolidated accounts for the first time, Clarendon primarily generates income through commissions, which are shown in the technical account. Standing at EUR 42 million, this income played a substantial role in boosting the technical result and contributed to the after-tax result even in this initial year of its consolidation.

Our overall investment income grew by 2% to EUR 828 million. Ordinary income increased by 5% to EUR 625 million; profits on disposals decreased, however, by 3% to EUR 286 million.

The acquisition of Clarendon, whose goodwill is to be amortised over 40 years, caused goodwill amortisations to rise to EUR 10 million. The increase in other expenses was largely attributable to higher interest expenditure.

The development of our tax burden was guided by very different and in part opposing factors. The former preparation of the balance sheet in line with the German Commercial Code was governed by the principle that the treatment followed for book purposes must also be adopted in the tax balance sheet. Consequently, the determination of the profit for the purposes of taxation and commercial law produced virtually the same results. By contrast, the additional profit arising under US GAAP compared to the income statement for tax purposes is subject to

notional taxation. The tax rate applicable to these deferred taxes amounts to 53% for domestic earnings, following 58% in the previous year. The reduction in this tax rate for retained earnings led to a lowering of the tax burden in the year under review. Furthermore, the extra provision which we had made in the previous year for disputed additional tax demands by the fiscal authorities based on a tax inspection ceased to apply in the year under review. On balance, therefore, the tax load decreased from EUR 242 million to EUR 80 million, giving rise to a sharp increase in the consolidated net income after deduction of minority interests. Since there was no change in the outstanding capital stock, the earnings per share increased accordingly.

In the case of companies such as ourselves for which outstanding calls still exist on the capital stock, US GAAP provides two different variants for the calculation of the earnings per share. Deducting the outstanding capital stock re-

duces the number of shares, thereby producing higher earnings per share. By taking into account the outstanding capital stock it is possible to calculate the so-called "diluted" earnings per share. Compared to the previous year, this rose by 18% to EUR 6.86. If these values are adjusted to allow for the increased goodwill amortisation due to the initial consolidation of Clarendon Insurance Group, the earnings per share total EUR 7.21 (+ 19%).

The balance of cash flows from underwriting, investing and financing activities produced a positive cash flow of EUR 186 million.

Our investment portfolio increased by a further 15% to EUR 9.9 billion in the year under review. This growth was attributable to movements in exchange rates as well as the expansion of our reinsurance business. Compared with the previous values shown in accordance with the German Commercial Code, our investment portfolio is higher because many invest-

Above-average return on equity

* Return on equity calculated in accordance with US GAAP

ments are shown at fair value under US GAAP rather than being subject to the strict lower-of-cost-or-market principle.

Our stockholders' equity increased by 10% from EUR 1.1 billion to EUR 1.2 billion. This produces return on equity of 24% before tax and 17% after tax.

The renowned US rating agencies once again each gave us their second-highest credit ratings: AA+ ("Very strong") from Standard & Poor's

and A+ ("Superior") from A.M. Best bear witness to the solidity and financial strength of our Group. For many of our clients, this remains a powerful argument in favour of striving for long-term cooperation with our company.

Risk Management

With effect from 1 May 1998 the German Federal Parliament adopted the Law on Controlling and Transparency in Business (KonTraG). Amongst other things, this law puts into hard-and-fast terms the obligation of the executive board of a joint-stock corporation to report on the risks inherent in a company's future development. In addition, appropriate measures must be taken, and in particular a monitoring system is to be established, in order to ensure that developments which may jeopardise the company's continued existence are identified at an early stage.

As an internationally operating reinsurer, we are confronted with a large number of risks which are directly associated with our business activities. Risk management has thus long been an integral component of all our decisions and business processes. The guiding principle underlying our risk management is to optimally exploit opportunities while at the same time appropriately controlling and managing the risks associated with our business operations.

We have at our disposal a broad range of efficient risk management and controlling systems. The structure of these systems and the depth of detail in the reporting depend upon the nature of the risk. The effectiveness of the systems is subject to constant monitoring and

adjustments are made according to changes in the business environment. The fundamental elements of risk management are set out in guidelines which apply to the entire Hannover Re Group.

Furthermore, on the basis of the provisions of the KonTraG, we conducted a project to systematically identify the risks which could pose a potential danger to our company's existence. This "risk inventory" produced 62 individual risks which have the capability to influence our company's risk situation. After analysing each of these individual risks in terms of possible loss amount, probability of occurrence and time horizon, nine risks remained which we consider to be particularly significant. As a next step, we identified and evaluated all planned and existing monitoring and controlling measures in order to ensure that no gaps exist in our risk management system. We set up a central controlling centre to co-ordinate all risk management activities and we documented our findings in a risk management manual. In all areas which the project revealed as offering scope or need for improvement, we specified concrete measures and responsibilities, with implementation subject to central monitoring.

The major risks faced by our company can be divided into the following five categories:

Global risks

This refers in particular to the significant risks arising for a reinsurer out of a change in the demand for reinsurance protection. We counteract these risks with material and geographical diversification of the reinsurance portfolio, regular adjustment of our underwriting policy and innovative product development. In addition, corporate strategy is regularly scrutinised by an interdisciplinary team in order to check whether modifications or realignments are necessary. These activities are supported by Group-wide optimisation and quality controlling of the core processes.

Strategic risks

Our worldwide infrastructure currently consists of more than 100 subsidiaries and affiliates with branches and representative offices in 20 countries. We set great store by the efficient steering of these companies. Irrespective of legal structure, we have defined four strategic segments whose special features we accommodate by way of explicit segment strategies. Mandatory, defined underwriting guidelines, a controlling system for our participations and fixed reporting structures ensure that potentially conflicting goals can be promptly recognised and resolved. Processes are subject to continuous optimisation, especially with an eye to cooperation within the Hannover Re Group. In the year under review we initiated a project, one of the aims of which is to improve the international identification code system through greater standardisation of controlling and reporting processes and a common technology base. Here, too, a combination of standard indicators and individual aspects ensures that, on the one hand, comprehensive comparisons are possible while, on the other hand, allowance is made for the specific features of the various strategic segments.

Operating risks

The global exchange of information and data both with our clients and within the Hannover Re Group is increasingly taking place via electronic media, including the Internet. The importance attached to the availability of the systems used and to data-security considerations is therefore constantly growing. Effective virus protection and secure network interfaces are a basic precondition for the efficient utilisation

of these media. Hannover Re has traditionally had appropriate contingency plans and security guidelines at its disposal. In view of the rapid pace with which IT requirements are constantly changing, we subjected our systems and IT processes to a security analysis in the year under review and on the basis of our findings we drew up various recommendations for action, some of which have already been implemented.

Underwriting risks

In order to enforce maximum loss limits for natural catastrophes, we drew upon scientific data to define maximum exposures per risk-zone. These limits are subject to constant monitoring. In addition, underwriting guidelines set out in detail which risks may be accepted, to which extent and within which area of responsibility. Statistically recognised models ensure that the pricing process also takes into consideration our specifically defined profit requirements. Retrocession constitutes an important tool for risk

limitation and the stabilisation of results. In this regard, we set great store by the credit rating and solvency of our retrocessionaires and we diversify our risk by specifying maximum shares according to the type of business involved. We use both internal and external sources of information to rate and classify retrocessionaires.

Investment risks

In the light of the latent high degree of risk inherent in our core business (reinsurance), risk limitation takes precedence over yield maximisation in our investment policy. Our goal is to generate an optimal profit contribution while adhering to specific maximum risk limits. The reinsurance and investment segments will in future be linked by a scientifically grounded system of Asset Liability Management. Compliance with the investment guidelines adopted by the Executive Board is ensured, inter alia, by the separation of trading and settlement functions and by an efficient investment controlling process with defined reporting and sensitivity analyses. Another of the risks facing an internationally operating reinsurer is the exchange rate risk. We limit this risk by matching liabilities in foreign currencies as closely as possible

with assets in the corresponding currencies, thereby equalising exchange gains and losses to the largest possible extent.

Functioning independently of the instruments described above, our Internal Auditing Department conducts routine checks as well as special audits in all corporate areas worldwide. As a general principle, the purview of these audits encompasses the efficiency of structures and workflows, the correct functioning of individual systems, compliance with internal guidelines and legal provisions as well as proper accounting procedures, hence covering all the essential elements of the risk management system.

On the basis of these insights, we do not currently perceive any risks which could jeopardise the continued existence of our company in the

short or medium term or which could impair the assets, financial position or net income in a significant or sustained manner.

Our business segments

The following section describes the development of business, subdivided strictly according to our four strategic segments. The corresponding

results are also shown in detail in our segment report as part of the annual financial statement.

Gross premium by segment

Gross premium by region

Property and Casualty reinsurance

Ten years ago property and casualty reinsurance accounted for more than 95% of our gross premium income. This figure has since decreased to just 39% (previous year: 61%) in the year under review. Yet in absolute terms this segment has scarcely declined; rather, thanks to our explicit strategy of diversification and due to the higher growth rates recorded by the other segments, its relative significance has fallen. The following remarks explain just how widely developments have varied in the individual markets.

Overall, gross premium income in property and casualty reinsurance decreased by 4%. After allowance is made for exchange-rate movements in the original currency, the decline is significantly greater. Our acceptances in this segment were guided strictly by the profitability of the business relationships, and we therefore

systematically reduced our portfolio. The combined ratio rose from 109% to 111%, especially due to the numerous natural catastrophes and other major loss events. From the perspective of the business result, however, property and casualty reinsurance accounts for the bulk of our investment income due to the relatively high reserve ratios. This proved more than sufficient to offset the technical deficit, and on balance the operating result before general expenses totalled EUR 297 million – a satisfactory result despite the deterioration of EUR 102 million.

The extent to which the individual markets contributed to this result varied.

Key figures for property and casualty reinsurance

Figures in EUR million	1999	1998
Gross written premium	2 614	2 734
Net premium earned	2 069	2 038
Technical result	-228	-192
Investment income	526	591
Operating result before general expenses	297	399
Loss ratio	88%	80%
Expense ratio	23%	29%
Combined loss /expense ratio	111%	109%

Germany

The volume of property and casualty insurance in Germany declined again, albeit less markedly than in the previous year.

In industrial property insurance (industrial fire and engineering insurance classes) the market premium contracted by approximately 7% following a decrease of around 8% in the previous year. With a reduction in premium income of roughly 17% (approx. 19% in the previous year), industrial fire and fire loss of profits insurance continues to give the greatest cause for concern. The loss ratio in the primary insurance market was in the order of 106%; this produced a substantially increased technical deficit which could not even be offset by the investment income attributable to this business.

The development of private property insurance was satisfactory overall until shortly before year-end. On 26.12.1999 storm "Lothar" caused insured losses across Germany on a scale of EUR 500 million. Baden-Württemberg was particularly badly hit. The loss ratio in homeowners' insurance consequently shot up by more than 10 percentage points compared to the previous year. The detrimental effect on our results was also substantial.

In motor insurance, which remains the most significant class of business in our reinsurance

portfolio, premium erosion continued, albeit on a lesser scale. The overall decrease was 0.8%, following 3.8% in the previous year. Initial tariff increases, which continued during 1999 and into the current year, made an impact here. Yet the balance of – still – declining average premiums, an increasing number of risks and rising claims' expenditure produced a market-wide technical deficit in the order of EUR 2 billion (EUR 1.2 billion in the previous year).

Proportional reinsurance continued to dominate the German reinsurance market and hence our German portfolio. We were therefore unable to divorce ourselves from this negative trend. Nevertheless, we pursued a highly selective underwriting policy and were prepared to accept a reduction in our premium volume. This policy as well as our own reinsurance enabled us to alleviate the negative repercussions.

Our operations in Germany are conducted exclusively by our subsidiary E+S Rück. This boosted its premium income from the German market by 10% to EUR 1.3 billion and showed a profit of EUR 10 million following a balanced result in the previous year.

United Kingdom and Ireland

In the UK insurance market, premium levels in the individual classes of business developed favourably during the year under review, most notably in the fourth quarter of 1999. This was particularly true of motor business.

This effect was enhanced in the reinsurance sector by a shortage of capacity, attributable to the fact that a number of reinsurers had withdrawn from the market. On the whole, therefore, reinsurance terms and conditions were markedly "less poor". Additional factors were the appreciable reduction in the reinsurance capacity made available by Lloyd's of London, leading to capacity shortfalls in certain sub-classes, and last but not least a growing demand for solvent reinsurance partners offering long-term reliability. This "flight to quality" en-

abled us to push through our pricing requirements considerably more often than in the previous year.

We particularly profited from this trend in property business, the relative share of which grew from 35% to 40%. Earnings from our portfolio in the United Kingdom and Ireland were satisfactory overall. Our activities in the UK market are conducted not only via head office in Hannover but also, and most significantly, through our subsidiary, International Insurance Company of Hannover (Inter Hannover). This company operates as an insurer and reinsurer in the property and liability classes, and it also participates through agents in a segment which is comparable with US program business.

France

The insurance industry in France benefited from a revival in the state of the economy as a whole, generating growth of 1% in premium volume after three years of stagnation. The rise in premium income was entirely attributable to personal lines. Industrial business, by contrast, experienced a premium decline of roughly 0.5% despite higher sums insured.

The burden of losses in 1999 had already surpassed that of 1998 when, during the last week of the year, the two winter storms "Lothar" and "Martin" put a surprising end to almost 10 years of calm on the storm front in France. "Lothar" swept across the entire country from Brittany through the Paris region to Alsace without losing any of its intensity, before continuing on its path of destruction through Germany, Switzerland and Austria. This unexpected outcome meant that for many cedants the losses exceeded their – traditionally tightly calculated – reinsurance cover for natural catastrophes. Similarly, "Martin", which followed almost immediately afterwards and whose storm

track was further to the south, again surpassed the reinsurance protection held by many insurers. As an additional factor, the two storms caused unusually heavy damage to industrial facilities, thereby further pushing up loss amounts. These events have already generated demand for greater reinsurance protection, while at the same time they served to accelerate the long overdue premium increases in industrial business.

The gross loss inflicted on the French insurance industry by the two storms is put at roughly EUR 4.6 billion, of which reinsurers around the world will carry approximately EUR 3 billion. In view of the constant deterioration in market conditions over recent years we had progressively scaled back our participation in windstorm business: our share was thus substantially lower than our market share in general. Despite this, our French business closed with a deficit in the year under review.

The Netherlands, Belgium and Nordic Countries

In North-western Europe the insurance and reinsurance markets alike were overshadowed by overcapacities and continuing, steadily intensifying competition over prices and conditions. In the primary insurance market, this was particularly true of the dominant sector of industrial property business, as a consequence of which the property classes generated only modest premium growth despite a sharp rise in the number of insured risks and sums insured. "Big is beautiful" was the motto under which Scandinavian companies, in particular, sought to face up to the increased competition through

mergers. The spectacular merger of the property and casualty operations of Storebrand, Pohjola and Skandia to form the "if" group is probably just the prelude to further consolidations.

Overall, our gross premium income declined slightly. In addition to the erosion in premiums, the storm "Anatol" in December 1999 placed a strain on technical results in the Scandinavian market – most notably in Denmark – and led to a deficit. Belgium and the Netherlands, on the other hand, closed with positive results.

Italy

In Italy, too, the process of concentration among insurers continued, leaving a steadily decreasing number of companies to serve the market. As is usually the case, this development went hand-

in-hand with an increase in retentions, and the market growth of around 7% in the insurance sector therefore failed to positively impact the volume of reinsurance.

In the year under review Italy was spared any spectacular catastrophe losses. While this below-average burden of major losses produced fa-

vourable technical results, it also served to further exacerbate the already competitive market climate.

The performance of our Italian portfolio reflected the above circumstances: given the prevailing state of the market, we restricted our activities to a limited number of selected target clients. Gross premiums contracted by around 5%, primarily due to the cancellation of business rela-

tionships offering unsatisfactory terms and conditions. However, this move had favourable repercussions on results, and combined with the modest number of major losses, it led to a technical profit.

Central and Eastern Europe

The reforming countries of central and eastern Europe are characterised by consistent economic growth which has gone hand-in-hand with corresponding development in the insurance markets. Virtually all these countries are seeking to join the European Union in the foreseeable future and are undertaking intensive preparations for this step by way of de-monopolisation and privatisation. The growth in the insurance markets is generating increased demand for capital and know-how, which can nevertheless be comfortably satisfied by western Europe and the USA with their available capacities. As a consequence, insurance markets in

eastern Europe are already experiencing significant competitive pressure at a relatively early stage. Furthermore, the rapid development of the industry is already giving rise to greater demand for modern, individually tailored reinsurance solutions.

In this region we participate particularly in the reinsurance of natural catastrophe risks. The demand for cover against earthquake risks increased sharply here in the course of the year. Our premium volume grew in step with the markets and produced gratifying results.

North America

Merger activities among insurers have been an ongoing trend in the USA for several years. For our company, however, this led to an enlargement rather than a contraction of our client base. Larger clients are increasingly adopting the "core reinsurer concept" with regard to their reinsurers, in other words they attach importance to the large capacity, excellent know-how and financial strength of a limited number of reinsurance partners. This concept has enabled and indeed continues to enable us to become a highly sought-after partner.

In the year under review legal impediments restricting the activities of financial institutions were eliminated. Banks can and indeed will open up more to insurance products. We see here a potential for new client relationships as well as increased demand for our reinsurance products.

Market conditions in the North American insurance market remained unsatisfactory in all respects in the year under review. Combined loss/expense ratios rose, reserve ratios and the flow of liquidity decreased and shareholders were confronted with sharply lower returns on equity. These factors combined to produce poorer-than-average results in the insurance sector with corresponding repercussions on stock prices. Due to the yield requirements imposed by investors, the pressure on management increased considerably to finally set in motion long overdue portfolio rehabilitation measures, such as raising premium levels and improving cost structures.

The reinsurance industry also suffered under this unfavourable climate; 1999 will probably go down in the statistics as one of the two poorest years in the past decade. Yet this sector failed to exert any pressure for the improve-

ment of terms and conditions. This would have required the withdrawal of capacity from the reinsurance market, a move which failed to occur in North American business to the necessary degree in the year under review.

With the exception of the specialist segments served by our subsidiary, Insurance Corporation of Hannover (ICH), we have consistently scaled back our North American portfolio in recent years due to the inadequate terms and conditions. In the year under review the low point was evidently reached.

Property insurance produced the second-highest loss burden in its history in 1999. Almost 40% of the insured losses worldwide were attributable to North American business. Major loss events were Hurricane Floyd in September (USD 2.5 billion) and the tornadoes in the Midwest in May (USD 1.5 billion). Despite the scale of these losses, the reinsurance market was relatively lightly affected by the aforementioned events because clients had increased their retentions. On the other hand, numerous sizeable industrial losses caused by fires or explosions produced losses for reinsurers which were well above the average.

On balance, property business therefore closed in the red in the year under review. However, it is gratifying to note in this connection that the

reinsurance terms and conditions for the treaties written or renewed during the year improved, sometimes to a significant extent. Initial insights from the current year would suggest that this trend is gaining impetus.

Based on the information presently available, the Y2K problem did not impact the liability sector as had been feared. Repercussions are, however, possible in property business: several major clients of the US insurance industry currently intend to file suit against their insurers with a view to securing reimbursement for the loss prevention expenses which they incurred in connection with the transition to the new millennium. It is virtually impossible, however, at the present time to predict the outcome of the anticipated litigation over questions of coverage.

The inadequate level of premium rates in liability business inflicted heavy losses on insurers. Commercial segments such as workers' compensation, truckers' liability and professional indemnity were particularly hard hit. The reinsurance sector was unable to divorce itself from this trend and similarly incurred poorer results.

We were not surprised by this development – in the past we had reduced our volume of business in these segments in particular. In the course of

the year, however, an improvement in terms and conditions could already be discerned, which even enabled us to increase our acceptances in certain subsegments. Especially in American liability business, we pursue a markedly anticyclical underwriting policy and it is our hope that disciplined conduct on the part of other market participants will further foster this trend. Profitable growth should then be possible again in the future.

Unlike in European agricultural insurance classes, where the emphasis is more on hail insurance, in the USA a highly specific type of crop insurance (MPCI – Multi Peril Crop Insurance) has been developed over the past ten years against the backdrop of government subsidies. We reinsure these risks exclusively through one of our US subsidiaries, Insurance Corporation of Hannover (ICH). ICH has positioned itself highly successfully and as a member of the Hannover Re Group the company has succeeded in penetrating the select circle of market leaders. It expanded its business volume by an impressive

28% and generated another favourable result through a prudent underwriting policy and coverage approach.

On balance we reduced our acceptances of American property and casualty reinsurance in the year under review due to the inadequate terms and conditions. Results were unsatisfactory and necessitate remedial action to restore business to profitability. We have taken initial steps during the current year and successes can already be discerned.

Latin America

The insurance and reinsurance markets in the more rapidly developing Latin American countries are founded primarily upon property business, whereas the insurance of liability risks ac-

counts as yet for only a very small proportion of the total premium volume. The economic trend and the number of natural catastrophe events are still the two determining factors in these

markets and both have proven exceptionally volatile in recent years. US and western European countries continued to concentrate on these growth markets and acquired local companies. Certain markets, such as Brazil, Cuba, Nicaragua and Costa Rica, remain (to date) off-limits to the free market owing to their state-regulated monopolies and partial monopolies.

During the year under review central America as a whole was affected by the so-called La Niña phenomenon, which caused a large number of losses through flood damage. The impact of these events on the international reinsurance industry was, however, slight.

In the Caribbean three hurricanes (Floyd, Lenny and José) produced significant losses, especially on the islands further to the east. Although the scale of the losses was not on a par with those caused by Hurricane Georges in the previous year, 1999 was the second successive year of high losses, resulting in the implementation of marked premium increases. Since we had not expanded our acceptances in 1999, our portfolio was affected only marginally by the aforementioned loss events.

For Venezuela, 1999 was a year overshadowed by numerous problems. At year-end floods and mudslides in and around the immediate vicinity of the capital, Caracas, caused losses with an estimated insured value of more than USD 300 million, of which we carried a share totalling almost USD 2 million. Oil production operations were stepped up in Colombia despite the decline in economic activity, thereby reviving hopes of an upswing in economic growth. Two major events were of significance to the insurance market: the acquisition of the Colombian market leader by a European reinsurance group and the January earthquake. The earthquake

caused insured losses in the order of USD 200 million, around 1% of which will be borne by our company.

In the Argentine insurance market, the poor results posted by local insurers led to further consolidation. Foreign companies, in particular, sought to increase their market share by way of acquisitions. The range of products expanded considerably due to the influence of European and US insurers, and in some areas it is now comparable with their standards. In the liability sector an increase in our reinsurance acceptances continued to be hindered by court decisions and virtually unlimited liabilities.

The Brazilian economy is driven by investment activities and also to a lesser extent by exports. It generates 60% of Latin America's overall gross domestic product. At roughly USD 14 billion, the total premium volume of the Brazilian insurance market corresponds to approximately 50% of the entire Latin American insurance market. Contrary to original plans, the long heralded liberalisation of the Brazilian market and the associated privatisation of the state-operated reinsurance monopoly again failed to materialise in the year under review. It will probably be implemented during the current year, and we remain prepared for this moment.

In conclusion, we expanded our reinsurance activities in Latin America very modestly in the year under review, generating good results with this restrained underwriting policy. The high losses of recent years brought about premium increases, but these are not yet adequate in all classes of business. Nevertheless, in association with the present favourable economic prospects there are growing indications that it will again be possible in future to profitably expand our portfolio.

Asia

The overall development of business in Asia was primarily influenced by the natural catastrophes in Japan and Taiwan. In Japan, the ongoing process of deregulation also left significant marks – the intensity of competition increased sharply, new types of coverage were offered and the scope of conditions was extended. The flames of competition were further fanned by the tendency to co-insure risks far less than had previously been the case. We made use of these new freedoms to expand slightly the volume of our business. In September 1999 the islands of Japan were hit by typhoon 18 ("Bart"), the most severe storm since 1991. We accepted such risks only on a selective basis and our participation in these losses was therefore relatively low, allowing us consequently to generate a balanced result.

Market conditions in Taiwan remained virtually unchanged in the year under review. On the one hand, the entry of a number of new market players served to step up the level of competition, on the other hand, the rise in economic activity led to an increase in insured values and hence boosted the market volume. The severe earthquake of 21 September produced heavy insured losses, most notably in a class in which we hardly participated. It was possible to offset to some extent the moderate losses from this business through profits from motor business, which again generated highly satisfactory results.

In China, Hong Kong and Korea we rank among the leading reinsurers. We nevertheless increased our premium volume only slightly, since the fierce competition frequently resulted in terms and conditions which we were not prepared to support. Only in those cases where we were able to make our influence count and where

our clients' expectations were in harmony with our own did we expand our portfolio. Premiums therefore grew only marginally. Our business posted a slight deficit, principally due to losses incurred by some of our cedents in Hong Kong as a consequence of acceptances in Taiwan and the earthquake which occurred there.

The economic situation in most ASEAN countries stabilised in the year under review, and the financial crisis appears to have been overcome. The stock markets recovered and exchange rates posted double-digit improvements without exception. This pleasing development had a favourable impact on the insurance markets, as a result of which almost all our clients finally succeeded in recording modest growth following two years of lean premiums.

Thanks to our continuous participation in our target clients' reinsurance programmes, we were able to profit from this trend. However, in view of the fact that many reinsurers are focusing heavily on south-east Asia as a market of the future and are willing in some cases to "invest" heavily in these markets by way of very generous terms and conditions, we are continuing to write business on an extremely selective basis. As an additional step, we expanded our non-proportional portfolio, thereby reducing our dependence on the intensely competitive conditions prevailing in the primary insurance markets.

Assisted by a "normal" loss experience, our branch office in Malaysia – which bears responsibility for the region of south and south-east Asia – generated a good result in the year under review. Most of our acceptances continued to be in property business, which was affected by only one windstorm event in India.

Australia and New Zealand

In April 1999 the Australian insurance market suffered the heaviest loss event in its history. A hailstorm swept through several Sydney sub-

urbs, causing an insured market loss of AUD 1.6 billion. Totalling roughly EUR 15 million gross, our share of this burden was substantially

INSURANCE DICTIONARY

英和 保險用語辭典

lower than our overall market share. Many insurers reviewed their risk situation in the light of this loss event and increased premiums for property policies. With competition still fierce, however, it was nevertheless impossible to restore premiums to a level truly commensurate with the risks.

This loss aside, the Australian economy was burdened by the introduction of a consumption tax. This tax is also levied on insurers' loss reserves and it placed an additional strain on companies.

Africa

As in the previous year, the insurance markets of southern Africa remained under the pressure of international competition in 1999, causing a further softening of conditions. This was especially true of South Africa, the continent's largest market.

We therefore expanded our acceptances in this market to only a modest extent. The technical results were the consequence of an overall unsatisfactory premium level and the unusually sharp rise in losses. These were attributable less to major loss events and natural catastrophes than to the high frequency of medium-

Having more than halved our acceptances in Australia in recent years due to the inadequate profit potential, especially under proportional treaties, we expanded our business volume slightly in the year under review. Some competitors withdrew from the market on account of their results. Despite the aforementioned strains on the market, we succeeded in showing an improved result. Nevertheless, our technical results remained negative and can at most be regarded as satisfactory if the apportionable investment income is also taken into account.

sized and minor losses in the fire and motor classes of insurance.

Through the liberalisation of the insurance regulatory framework under local insurance law, the South African government enabled us to bundle our business activities in South Africa. During the year under review, we therefore transferred the reinsurance business from English-speaking southern Africa previously written by head office in Hannover to the Hollandia Reinsurance Group. At the same time, we raised our existing 52% capital interest in this company to almost 70%. In addition, with effect from 1 January

2000 we renamed the Hollandia Reinsurance Group, which now trades as Hannover Reinsurance Group Africa (Pty) Ltd. The Group's members Hollandia Reinsurance, Hollandia Reassurance Accident & Health and Coral Reinsurance Mauritius were renamed accordingly. Our service company, Hannover Services (Pty) Ltd., Johannesburg, was sold as at 31 March 2000.

By concentrating all our activities in English-speaking Africa on a local operation, we enjoy a superb strategic position in this region. The orientation of Hannover Re Group Africa (Pty) Ltd. is in line with the structure which we have assigned to our strategic segments worldwide, and it bears exclusive responsibility within its region.

The Arab markets in northern Africa were largely characterised by steady growth, most notably in proportional property reinsurance. Extensive efforts were made to privatise and open up the insurance markets in Algeria, Libya and Mauritania. In the year under review, however, this did not lead to any new business relationships.

Our portfolio grew in step with the markets by a comfortable double-digit margin and generated – in part owing to the absence of major losses – a gratifyingly favourable profit contribution.

Life and Health reinsurance

Significant expansion has been very much the hallmark of our technical result in life and health reinsurance in recent years. In this segment we have specialised in treaties with a prefinancing

component; this produces high losses in the first year under German accounting rules since the full extent of the financing expenditure has to be shown.

Key figures for life and health reinsurance

	1999	1998
Gross written premium	2 220	1 403
Net premium earned	1 485	1 159
Technical result	46	23
Operating result before general expenses	46	23

Under US GAAP, however, allowance is made for the investment-orientated nature of this expenditure by capitalising the pre-financed acquisition costs and writing them off over the period of the treaties. On this basis of calculation, the operating result before general expenses was exactly doubled to reach EUR 46 million.

Gross written premiums rose by 58% in 1999 to EUR 2,220 million and thus accounted for 33%

of our total premium income – following 31% in the previous year. This means that within the past ten years, our portfolio has grown more than forty times over. Whereas in the two previous years we achieved additional growth through the integration of the portfolios acquired from Skandia International in Sweden, France and the United Kingdom, in the year under review the expansion of our business volume was wholly organic. The business development comfortably

surpassed our expectations, with special growth impetus deriving from the US, Australian, German and Asian markets. An extraordinary boost of approximately EUR 200 million was attributable to a one-off transaction with a major Australian life insurer.

In the year under review we pooled all our activities in life and health reinsurance under uniform management, establishing the global brand "Hannover Life Re" specially for this purpose. As at the end of 1999 a total of around 250 staff were working for Hannover Life Re (including business administrators, mathematicians, medical experts, underwriters and IT specialists), with more than 80% of them employed at locations outside Germany.

In addition to its head office in Hannover, the Hannover Life Re division currently encompasses a network of seven reinsurance companies, which in the framework of our strategic orientation carry exclusive responsibility within their regions or sub-segments:

- E+S Rückversicherungs-AG, Hannover, for the German market;
- Hannover Life Reassurance Company of America, Orlando/Florida, USA, for the United States;
- Hannover Life Re of Australasia Ltd, Sydney, for Australia and New Zealand;
- Hannover Life Reassurance Africa Ltd., Johannesburg, for the markets of southern Africa;

- Hannover Life Reassurance (UK), Ltd., Virginia Water (UK), for part of the British (incl. Lloyd's) and Irish markets;
- Hannover Re Sweden Insurance Company Ltd., Stockholm, for Scandinavian and eastern European countries;
- Hannover Life Reassurance (Ireland) Ltd., Dublin, for international financing transactions (especially in connection with block assumption transactions);
- Hannover Life Re, Hannover, with branches and representative offices in 10 countries, for all other regions and markets

The following changes in the worldwide presence of Hannover Life Re were particularly noteworthy in the year under review:

- At the end of 1999 the local supervisory authorities in Hong Kong and Malaysia granted licences to operate branch offices for our life business. This will considerably strengthen our position in the Asian growth markets. With effect from 1 January 2000 we transferred the bulk of the reinsurance business hitherto written in these markets to our new branch offices.
- In November 1999 we also received a licence for the life reinsurance company Hannover Life Reassurance (Ireland) Ltd. from the Irish supervisory authority. Equipped with fully paid-in capital stock of EUR 75 million, the company has now commenced business operations.

Hannover Life Re's international strategy pursues the consistent, long-term vision of positioning itself in our selected target markets as a leading reinsurer for financing transactions and as a product partner for the development of innovative coverages. In this regard, business is usually written directly, i.e. we seldom call on the services of intermediaries.

In our role as a product partner we concentrate on innovative concepts from the areas of unit-linked life insurance, immediate annuity products and coverage concepts for older customer groups.

As a financing reinsurer, we attach special importance to reinsurance transactions with a financing volume of up to EUR 25 million in individual cases for:

- the pre-financing of acquisition costs in the case of ordinary life and annuity policies with regular premiums,
- the assumption of reserving expenses in the case of annuity policies with one-off premiums or
- the liquidity-affecting transfer of future earnings from in-force business under life, personal accident or health insurance portfolios.

As in previous years, the net embedded value – in other words, the value of future earnings from returns on pre-financing arrangements, disregarding future new business – was calculated for the portfolios of each of the operational risk-carriers of Hannover Life Re. The goal was to obtain a realistic valuation of our portfolio on a consistent worldwide basis. In this context, we accept that the calculated embedded values are subject to considerable volatility over time due to the influence of the interest rate level (with direct implications for the discount interest) and exchange rates. As an example, the major currencies for our business (US dollar, pound sterling, Australian dollar) alone positively influenced the net embedded value by EUR 33 million. Internationally renowned firms of actuaries have checked the calculated values and confirmed their correctness. The net embedded values of the Hannover Life Re companies are shown in the following table for both 1998 and 1999.

Geographical breakdown of life and health reinsurance as % of gross premium income

Growth in the non-capitalised portfolio value	90	

The loss experience again varied widely according to risk category in the year under review. A continuing highly favourable loss experience in life business and under dread disease covers contrasted with the unsatisfactory performance of US health business in certain sub-segments. The disability risk, which particularly affects our Australian disability annuity portfolio, showed considerable improvement in the year under review and returned to the profit zone after two years of deficit.

Due to the fact that in the USA, in particular, we wrote risk-oriented health reinsurance business only on a very limited scale, we were scarcely involved in the problems surrounding US workers' compensation business, which inflicted heavy losses on numerous competitors.

Block Assumption Transactions (BATs) in life, annuity and health business continue to be a special feature of our Group's product policy, and we are able to use this tool in a broad range of financial scenarios. These arrangements release our clients' tied-up capital and enable them to pursue key financial policy objectives with regard to the management of their balance sheet and income statement. In the course of the year under review we again concluded several major transactions of this type in the USA, Luxembourg and

Australia. We have thus designed and implemented almost 50 of these transactions with our clients since 1994. The average transaction expenses were in the order of EUR 4.0 million, and we have therefore invested a total of roughly EUR 200 million in this product line since 1994 – with the year under review accounting for as much as EUR 51 million.

Hannover Life Re's overall international client base is relatively concentrated – 90% of the premium income was generated by the 80 most significant clients and major relationships in the year under review. This focus enables us to operate on a highly efficient business basis, and we generally achieve long-term partnerships with our clients which go well beyond the norm in the reinsurance sector. We stand by our view that stable client relationships structured to both parties' mutual benefit constitute a uniquely valuable asset in our operations. In a growing number of cases we are the exclusive reinsurer, or with a share of more than 50% in a reinsurance transaction we enjoy the role of preferred reinsurance partner.

Breakdown of life and health reinsurance into classes of business

In order to better serve the Asian growth markets, especially China, Thailand and Malaysia, we assembled a high-quality group of senior consultants from the USA and Canada in 1998. Currently comprising twelve members, this team undertook various specific consulting assignments in China and Thailand and performed consulting tasks in the areas of product development, IT systems support and distribution strategies as well as activities of a more general nature in the year under review. The group is led by our consulting company Hannover Life Re Consultants, Inc., which is based in Orlando (USA).

In 1998 we began – as a worldwide pioneer – to transfer acquisition costs pre-financed for our

clients to the international capital markets with a view to securing partial refinancing to relieve these new business strains. We successfully pressed ahead with this policy in the year under review, setting up two further transactions designated "L3" and "L4" which we successfully placed in the capital market.

For the next three years we thus have at our disposal an additional amount of EUR 150 million, which we shall use above all to cost-efficiently refinance the booming area of unit-linked individual life business in Europe.

Financial reinsurance

Given the currently strained state of the market, fewer and fewer companies can afford to spread their risks on the underwriting side within a single year; instead, they are obliged to make more long-term calculations. It is precisely here that the advantage of financial reinsurance lies – we offer solutions which stabilise our clients' results in both the short and the long term. A particularly high potential for this business exists in the US market. While not dependent upon financial reinsurance solutions, many clients here

are better able to achieve their profit targets with the aid of a reliable partner. Accounting for roughly two-thirds of our total premium volume in this segment, the USA will thus clearly continue to be our main market in the years to come.

In financial reinsurance we offer our clients individually structured covers which are designed to stabilise their earnings and protect their balance sheet. Although self-financing aspects form the major element of such transactions, some also

contain a degree of risk transfer – although this can vary widely according to each individual case.

The overcapacity within the traditional property and casualty reinsurance markets – frequently at conditions guided more by a desire for increased market shares than by sound underwriting considerations – has reduced the demand for transactions geared to the self-financing of (re-)insurance risks. A further factor is that financial reinsurance solutions are now available from almost all major reinsurers as

well as specialised providers, some of whom entered the market only very recently.

We direct our activities in the financial reinsurance segment from the International Financial Services Centre in Dublin. Business is written by the two Irish subsidiaries of the Hannover Re Group, Hannover Re (Ireland) and E+S Re (Ireland). These highly capitalised companies enjoy – within the scope of the rating awarded to the Group as a whole – a rating of A+ ("Superior") from A.M. Best.

Key figures for financial reinsurance

Figures in EUR million	1999	1998
Gross written premium	509	368
Net premium earned	462	351
Technical result	-37	-37
Investment income	75	79
Operating result before general expenses	38	42
Loss ratio	62%	97%
Expense ratio	46%	13%
Combined loss/expense ratio	108%	110%

Despite the intensely competitive climate, our portfolio of financial reinsurance again recorded highly successful growth in the year under review. The decisive factors here were our ability to design and quickly implement bespoke reinsurance structures as well as our capacity, which is large enough for us to assume transactions of virtually any size.

Gross premium income in financial reinsurance increased by an impressive 38% to EUR 509 million in the year under review. In addition to the depreciation of the Euro against the US dollar, this growth derived principally from new treaties with selected US clients. The volume of some of our treaties increases dynamically in the event of exceptional loss expenditure. Consequently, the major losses of the year under review served to generate additional growth.

On the other hand, the limitation of the underwriting risk in our treaties meant that such losses scarcely impacted our technical result. In almost all instances the burden of losses remained between the envisaged upper and lower limits. Only in the German market did the poor results in motor insurance also detrimentally impact our result. Overall, though, financial reinsurance again generated a highly gratifying profit contribution. Given the fact that financial reinsurance treaties frequently contain interest components, it hardly makes sense to consider the technical result in isolation. In accordance with standard market practice, we therefore include investment income in our analysis of the performance of this segment. Although our operating result before general expenses declined slightly to EUR 38 million, it was again highly satisfactory. The expense ratio climbed sharply in the

year under review due to the cancellation of existing treaties.

We anticipate a sustained growth rate of 15 - 20% in financial reinsurance. However, since this growth is always dependent on a relatively small number of large-volume treaties, the possibility of pronounced fluctuations can never be ruled

out. In our assessment, conditions in property and casualty reinsurance are still unsatisfactory, and we shall therefore accept underwriting risks as part of our treaties only to a very limited extent. Whilst this strategy may cause us to forfeit certain growth opportunities, it ensures the lasting stability of our profit flows.

Program business

The Hannover Re Group acquired all the shares of Clarendon Insurance Group, New York, with effect from 1 January 1999. Clarendon is a market leader in US program business. Whilst this speciality of the US market technically constitutes primary insurance, this acquisition in no way signifies our entry into the insurance sector. Program business is written in very close cooperation with highly specialised managing general agents and reinsurers. In many respects it reflects the principles and practices of reinsurance, and for this reason it constitutes a strategic segment in its own right within our Group. The trend towards specialisation in particular market segments is not restricted to the USA. It is our assumption, therefore, that in the future Clarendon will not be the sole contributor to the program business segment worldwide, but will be joined by other operational risk-carriers.

Under the business model for program insurance a "managing general agent" (MGA) specialises in clearly defined, homogeneous risk segments which most standard insurers tend to avoid. The MGA develops an insurance product which caters precisely to the needs of this risk group. He handles marketing, product design and sales, takes responsibility for underwriting, policy issue and premium collection and provides the entire spectrum of customer service up to and including claims adjustment.

As a program insurer, Clarendon itself assumes only a small part of the underwriting risk while also – in cooperation with the MGA – handling placement of the reinsurance. Clarendon receives a fee for the risk transfer service which it provides between the MGA and the reinsurer, and these fees constitute its main source of income. Within

Key figures for program business

<i>Figures in EUR million</i>	<i>1999</i>
Gross written premium	1 364
Net premium earned	163
Technical result	42
Investment income	10
Operating result before general expenses	52
Loss ratio	79%
Expense ratio	-4%
Combined loss / expense ratio	75%

the limits permitted by supervisory regulations, the underwriting risk is assumed by renowned international reinsurers who are normally integrated into the entire process – especially as regards the pricing and terms and conditions of the insurance products – from the very outset. With a network comprising several subsidiaries, Clarendon is licensed to operate in all American states and can thus offer its services to MGAs throughout the USA. By way of regular audits it monitors the development of the assumed risks, compliance with the agreed underwriting guidelines, proper claims adjustment and prompt settlement.

Clarendon has concentrated on programs in the non-life classes and it generates roughly two-thirds of its gross premium income from motor, private homeowners', workers' compensation, personal accident and health insurance. The focus on niche segments in the market means that this business involves unusual risks, such as difficult-to-place windstorm risks in Florida and earthquake risks in California as well as problematic motor insurance risks.

Gross premium income rose to EUR 1.4 billion; this was in no small measure due to the integration into the Hannover Re Group and the resulting improved credit rating. In accordance

with the business model explained above, 89% of gross premium was passed on to reinsurers. Net premium consequently amounted to just EUR 163 million. Clarendon's own reinsurance cessions rose substantially, giving rise to increased fee income of EUR 77 million. Due to the reduced retention the investment portfolio also contracted, leading to a decline in investment income. The loss reserves had been considerably boosted in the previous year as part of the takeover by Hannover Re. Owing to the elimination of this exceptional factor and the increase in commission income, the technical result improved markedly and a highly satisfactory combined ratio of 75% was achieved. Consequently, even in Clarendon's initial year of consolidation, the operating result of EUR 52 million before total cost allocation made a very favourable contribution to the Group's performance.

Investments

The stock markets enjoyed another year of above-average price gains in 1999. Share prices climbed at year-end to new record highs across Europe and in the USA. The rally, which only began in October in Europe, rewarded investors with double-digit price gains. Investors' concerns about high interest rates were dispelled thanks to the central banks, which due to an extremely generous liquidity position kept the markets well-supplied with capital. The funds channelled into equity investments by private investors created a further inflow of liquidity. The good performance of the "New Market" was in no small measure the product of this development.

Rating of fixed-income securities

The Euroland index – the Euro Stoxx 50 – closed the year at 4,904 points, an increase of 47%. The Dax, which for a long time lagged behind developments on the other European markets, also ended the year at a new record high of 6,958 points. This represented a price gain of 39% compared to the previous year. In the USA the Dow Jones Index performed superbly to close up 26%. 1999

was thus the fourth consecutive year with market profits (18% in 1998, 23% in 1997, 26% in 1996).

A veritable "gold-digger" climate prevailed among "dot.com" stocks. A flood of new issues washed across the market, turning young start-up entrepreneurs into millionaires almost overnight. Investors, too, profited handsomely from these young companies. The anticipated high growth rates made this type of investment especially attractive for investors.

We too benefited from this development on the stock markets. Following the launch of the Euro in January, we took the opportunity offered by the market situation to switch parts of our equity portfolio to European countries outside Germany.

Through new investments in technology stocks, this re-grouping generated a markedly above average investment performance.

Investments in the bond markets experienced a difficult year in 1999. It began with the launch of the Euro and ended – following an all-time yield low of 3.63% for 10-year European government bonds – with steadily rising interest rates. In December 1999 10-year German federal government bonds were priced at 5.33% – a plus of 170 basis points in the space of just 11 months. The downward trend in interest rates which had persisted for several years thus turned the corner in 1999.

This movement was accompanied by a change in central bank policy. The first official act of the new European Central Bank (ECB) was to cut the main refinancing rate by 0.5% to 2.5% – a step which was decidedly controversial. Subsequently, however, the brightening economic climate in Europe, the decline of the Euro against the US dollar and the steady increase in commodity prices served to push up interest rates on the bond market. The flight of capital from the bond markets was exacerbated by the sustained boom in the US economy, which also caused the stock markets to soar. After the US Federal Reserve Board (otherwise known as the "Fed") had reacted to the strong pace of economic growth by increasing its base rates from June onwards in three increments of 0.25% to 5.5%, thereby also officially initiating the trend reversal in interest rate policy, the ECB found itself compelled in November to reverse its April rate cut. Calm then returned to the currency front, which temporarily eased the strain somewhat on the bond markets, too. Our investments in the bond markets were concentrated in the short and intermediate maturity areas, and the price losses resulting from the yield increase were therefore relatively modest.

The situation on the foreign exchange markets last year was also heavily influenced by the launch of the Euro on 1 January 1999. In the first year of its existence the Euro experienced in some cases sharp falls against its most significant partner currencies. In the course of the year it declined 14% in value against the US dollar. Since we hold most of our investments in foreign currencies, the devaluation of the Euro – our balance sheet currency – had positive repercussions on the reporting of income collected in the original currency.

Due to the further expansion of our reinsurance business and against the backdrop of the declining Euro exchange rate, most notably against the US dollar, our total investment portfolio showed another sharp increase compared to the previous year. As at year-end 1999 our total investments amounted to EUR 9.9 billion, a figure which corresponds to growth of 14.7%. However, this growth also reflects other opposing factors. In view of the fact that under US GAAP the fixed-income and equity securities available for sale are assessed at fair value, the worldwide rise in interest rates produced a marked decline in unrealised price gains in our bond portfolio. These were at least partially offset by the soaring stock markets and the associated rise in the fair value of our equity portfolio. Overall, though, the un-

realised price gains in our total equity portfolio decreased by EUR 197 million to EUR 118 million due to the rise in interest rates and realisation of profits on disposals. The initial consolidation of Clarendon Insurance Group, on the other hand, contributed around 3.7 percentage points – or in absolute terms EUR 317 million – to the growth in the investment portfolio.

There were no significant changes in the structure of our investment portfolio in the year under review. The focus continued to be on fixed-income securities, which accounted for 66.6% (previous year: 69.7%) of total investments. At the beginning of 1999 we slightly shortened the maturity pattern of the portfolio. As in previous years, we set great store by the high quality of our fixed-income securities and therefore invest a large proportion of our holdings in bonds with the highest AAA rating.

Breakdown of investments by currency

Share trading in the year under review was for the most part again in the large, liquid "blue chip" stocks of the American, European and British exchanges. We hold modest equity positions in Australian and South African stocks through our subsidiaries. With a market value of almost EUR 1.4 billion, the total share portfolio is now equivalent in value to our stockholders' equity shown under US GAAP. In addition to the major liquid equity positions, in recent years we have also built up a portfolio of private equity investments which is reported in the balance sheet under the item "Other invested assets". The very favourable mood on the stock markets enabled us to generate another above-average result in 1999 for this investment class.

We continue to hold appropriate funds in short-term investments in order to guarantee prompt settlement of our clients' payment requests even in the case of major loss events.

Ordinary investment income increased in the year under review by just under 5% to EUR 624.9 million. The growth in the investment portfolio and the fall of the Euro impacted favourably here, although this effect was to some extent offset by the continued low interest rates around the world. As a result, securities due for redemption

could only be reinvested in instruments offering lower yields. We again exploited the strong performance of the stock markets and benefited from profit-taking on a large scale. With realised profits on disposals of altogether EUR 286.4 million, we followed on from the high level of the previous year. Together with the change in the value of our portfolio of private equity shares, which is included under the item "Unrealised gains and losses on investments" in the statement of income, the total investment income including administrative expenses amounted to EUR 828.2 million, a figure slightly in excess of the previous year's record value (EUR 814.7 million).

In order to strengthen our equity base we took out a long-term, subordinated loan of USD 400 million through our subsidiary Hannover Finance Inc. in the USA. This takes the form of so-called "hybrid capital", a term which means that the subordinated loan also has equity character. On the basis of the excellent credit rating of our company, the loan was placed highly successfully at an interest rate of 6.8%, thereby causing interest expenditure substantially lower than the comparable cost of equity.

Human Resources

The increasing internationalisation of the Hannover Re Group was again the hallmark of our personnel management in the year under review. Primarily due to the acquisition of Clarendon Insurance Group, New York, the number of employees rose from 1,081 in the previous year to 1,518 in 1999. As a result, for the first time more staff are working abroad for the Group than at head office in Hannover.

Against this general backdrop, we decided to realign our worldwide activities. We are analysing all our structures and processes with a view to more efficiently exploiting our productive and synergistic potential. With this goal in mind, we launched a project entitled "Hannover Re Global" aimed at creating a new system for steering

the Group which gives due consideration to our subsidiaries, branch offices and representative offices. We have developed innovative solutions which incorporate organisation, controlling, information technology and human resources into the steering mechanisms of the Group as a whole. Corresponding pilot projects aimed at implementation have already been initiated during the current year at our offices in Milan and Stockholm.

At workshops attended by officers from virtually all our global operations, we devised concepts for efficient international cooperation and drew up binding principles for a Group-wide Human Resources policy. It was particularly important in this context to take into account the special

features of the various national cultures. As part of this concept, our staff are being given greater opportunities to gather experience abroad as well as in their home country. We are systematically encouraging employees to spend periods abroad – for the most part on a temporary basis – at our operations in different countries and on various continents.

By stepping up our presence at career events organised for universities and by intensifying contacts with the individual department chairs, we are regularly able to recruit highly motivated graduates to our company. In order to ensure that we always live up to our claim to offer clients the best possible service, we offer our employees a broad range of training opportunities. With the aid of our personnel development programmes, we make certain that our staff are well-equipped to handle their complex tasks.

In the year under review we again promoted flexible work organisation. 18% of our staff in Hannover are employed on the basis of part-time working arrangements. This enables our employees to better harmonise their family needs and

career goals, while our company retains their valuable experience and expertise.

Again as part of a company-wide project, we enhanced the flow of our business processes in order to improve still further the efficiency of our personnel management. The central component of this optimisation was the implementation of the integrative Human Resources management software SAP R/3 HR. With the aid of this tool we can provide management with quicker and more detailed information and decision-making bases. This multi-lingual information system will also assist us in our international activities.

We would like to take this opportunity to thank our members of staff for their commitment and personal dedication. The success of the Hannover Re Group was again in very large measure attributable to their efforts. We would also like to express our appreciation to the workers council and the senior management committee for their constructive and trusting cooperation.

Outlook

The favourable global economic trend is expected to be maintained in the current financial year. The dynamic growth witnessed in the USA to date will probably begin to slow down, in part because of the more restrictive monetary policy. Key growth indicators for Japan are expected to be marginally positive again in 2000, although it is still too early to forecast a sustained breakthrough. Western Europe will slightly boost its upward trend and close the gap on the USA. Developing countries are again expected to generate better-than-average growth, with the rates of increase tending to be somewhat weaker in Asia while gaining in impetus in Latin America. Despite a modest improvement in the economic indicators, the outlook for Russia remains unfavourable. The economic upswing of last summer gathered speed at a relatively late stage in Germany. It appears to be continuing, and will

probably even accelerate thanks to the extremely favourable state of the export market. Given the low inflation figures, monetary policy in Germany will remain expansionary despite a slight rise in interest rates.

Based on the insights which we gained from the last major renewal season (year-end), the expectations for our various business segments in the current year again differ very widely. In property and casualty reinsurance the worldwide downturn in treaty terms and conditions has been halted. In some markets - not only those which suffered heavy losses in the previous year – it has been possible to obtain improved terms and conditions, sometimes to a satisfying extent. Yet overcapacity persists in the market, hence keeping up the high level of competitive pressure. Doubtless driven ultimately by a striving

for market shares, the portfolio rehabilitation measures that had been announced, most notably by the market leaders, were sometimes implemented on a very half-hearted basis. Consequently, premium adjustments frequently fell short of the level which would have facilitated profitable growth. Favourable indications emerged from the London Market, the USA and Latin America as well as – to a limited extent – Germany. The treaty renewals in the rest of continental Europe were, if anything, disappointing. The devastating winter storms "Lothar" and "Martin" occurred at a time when most of the treaty conditions had already been fixed. However, these events will definitely favourably influence treaty negotiations during the current year as well as the next renewal season, especially in France. Another indicator, which normally heralds a "hardening" of the property and casualty reinsurance markets, is now becoming increasingly evident – a capacity shortage in the retrocession markets, in other words the possibilities for reinsurers themselves to obtain reinsurance.

In the light of this general environment, we anticipate only moderate overall growth in property and casualty reinsurance. Assuming a normal "loss experience" and hence a reduction in the previous year's burden of major losses, the combined ratio in this segment should decrease considerably and thus enable us again to post satisfactory results for the underwriting year. As at the date of compilation of this report, the current year has fortunately been spared major catastrophe losses, and our assumption that the loss burden will normalise therefore appears to be justified.

Due to the way in which we transact life and health reinsurance, this segment depends little on the renewal of existing treaties. Rather, portfolio growth is contingent on the conclusion of new transactions in which we are not infrequently the sole reinsurer. Although competition has intensified in life and health reinsurance too, the development of conditions is scarcely cyclical. As defined in our strategy, we concentrate on re-

insurance treaties with a financing component in a limited number of geographical regions. In the long term we believe sustained growth of 15 – 20% is attainable. Growth on this scale also appears realistic for the current year. We shall continue to make extensive use of our securitisation instruments in order to offset the resulting anticipated pre-financing strains. In this way we ensure that we can generate stable, increasing profits on a long-term basis.

Our portfolio of financial reinsurance is based on a comparatively small number of large-volume treaties, some of which are also – in accordance with the original intention – of a one-off nature. Consequently, the development of gross premium income is substantially more volatile here than in the other segments. Since the basic conditions in which the international insurance industry operates are continually changing, fresh opportunities are constantly arising – which we exploit using a client-specific approach. In the current year, too, we have already concluded new treaties. We therefore expect to generate further disproportionately large growth in our portfolio of financial reinsurance and anticipate stable profits.

"Year 2" after the acquisition of Clarendon will be used to expand business relationships even more vigorously. Especially due to the ensuing marked improvement in its credit rating, Clarendon is now well on course to position itself as the clear market leader in program business in the USA. We anticipate a double-digit expansion of premium income and corresponding profit increases. What is more, we are striving to export the principles of program business to other markets, most notably the partnership-based cooperation with specialised managing general agents. The principal target markets here are Canada, Brazil, the United Kingdom and South Africa, where this business model already exists, as well as Australia and continental Europe. In the initial years, however, this will not lead to any significant increase in premium income.

On the basis of these expectations, we anticipate another double-digit increase in our gross premium income.

Forecasts regarding investment income are by their very nature difficult to make. Given the overall development of the global economy described above, dramatic interest rate rises and

sharp stock market corrections are unlikely. Under such a "normal" scenario, we expect higher ordinary investment income and a normalised level of realised price gains on the basis of an increased investment portfolio.

Proposal for the distribution of profits

We intend to propose to the Annual General Meeting that the net income should be distributed as follows:

	EUR
Payment of a dividend of EUR 2.05 on each currently participating no-par value bearer share	34 292 840.75
Payment of a dividend of EUR 1.28 on each no-par value registered share that has been partially paid up to the extent of 62.5%, and of EUR 1.20 on each no-par value registered share that has partially paid up to the extent of 58.3%	16 000 000.00
Profit carried forward	7 159.25
	50 300 000.00

General accounting principles

The parent company of Hannover Rückversicherungs-Aktiengesellschaft (Hannover Re) is HDI Haftpflichtverband der Deutschen Industrie V.a.G. (HDI). HDI is obliged to prepare consolidated annual accounts in accordance with Paragraphs 341 i. et seq of the German Commercial Code (HGB). The annual financial statements of Hannover Re and its subsidiaries are included in these consolidated annual accounts. We have prepared our own consolidated financial statement, although there is no legal obligation to do so, in order to show the activities of the Hannover Re Group.

This consolidated financial statement has been drawn up for the first time fully in accordance with United States Generally Accepted Accounting Principles (US GAAP). The Group accounting was converted to US GAAP in 1999. For reasons of comparability, the figures from the 1998 consolidated financial statement have also been restated in line with US GAAP.

Consolidated companies

Hannover Re is the parent company of the Group. The consolidated financial statement includes four German companies and thirteen foreign companies, as well as two foreign consolidated entities. One consolidated entity (Hannover Finance, Inc.) was acquired in the year under review and therefore included in the consolidated financial statement for the first time in 1999. Two foreign insurance companies were consolidated using the equity basis of accounting.

In 1999 the Lion Group was acquired by Hannover Finance (a wholly-owned subsidiary of Hannover Re and E+S Rück). The purchase price was USD 475.0 million, of which USD 400 million was financed by way of a loan. Funds were deposited in an escrow account for part of the purchase price, which is dependent on future contingent conditions. The major subsidiaries of this group transact program business in the USA. In 1985 one of these subsidiaries purchased six aircraft, which were leased to Continental Airlines. These aircraft were resold in 1986. The proceeds of the resale were deposited in an escrow account as security for the leasing instalments payable by Continental Airlines. This escrow account is released in line with the leasing instalments paid by Continental Airlines. As at the date of the annual financial statement the value of this escrow account stood at EUR 64.75 million.

The following companies are included in the consolidated financial statement:

<i>Name and registered office of the company</i>	<i>Participation in %</i>
E+S Rückversicherungs-AG, Hannover/Germany	50.1
GbR Hannover Rückversicherungs-AG/ E+S Rückversicherungs-AG-Grundstücksgesellschaft, Hannover/Germany	67.5

<i>Associated companies:</i>	
ITAS Assicurazioni S.p.A., Trient/Italy	43.7
ITAS Vita S.p.A., Trient/Italy	43.7

A complete list of shares in affiliated companies and participations has been drawn up separately and deposited with the Commercial Register (Hannover HRB 6778).

Consolidation principles

Capital consolidation

The capital consolidation was based upon the "purchase accounting" method (comparable to the German revaluation method). The purchase costs of the parent company have been netted with the proportionate stockholders' equity of the subsidiary at the time when it was first included in the consolidated financial statement after the revaluation of all assets and liabilities. The difference between the revalued stockholders' equity of the subsidiary and the purchase price is shown in the assets as goodwill and depreciated at a constant rate over the expected useful life. The anticipated useful life is between 15 and 40 years. Immaterial and negative goodwill are booked to earnings in the year of their occurrence.

Where minority interests in the stockholders' equity exist, such interests are shown under other liabilities. The minority interest in the result is deducted from the net income in the statement of income.

Consolidation of receivables and liabilities

Receivables and liabilities between the companies included in the consolidated financial statement are offset against each other.

Consolidation of expenses and profits

Expenses and profits within the Group were offset against each other and interim results were eliminated.

Relations with affiliated non-consolidated companies

HDI Haftpflichtverband der Deutschen Industrie V.a.G. indirectly holds approximately 75% of the shares of Hannover Re through Talanx AG.

The Hannover Re Group is responsible for the reinsurance of the HDI Group. To this extent, numerous underwriting business relations exist with affiliated companies in Germany and abroad which are not included in Hannover Re's consolidation. This applies to both assumed and ceded business. The written premium assumed from HDI totalled EUR 594.8 million in 1999, while that assumed from all other affiliated companies not included in our consolidation totalled EUR 213.6 million. In 1999 we ceded written premium to HDI in the amount of EUR 2.0 million and to all other affiliated companies not included in our consolidation in the amount of EUR 15.6 million. As at 31 December 1999 we showed funds held by HDI totalling EUR 0.2 million, funds held under reinsurance treaties in respect of HDI totalling EUR 220.8 million and reinsurance payable totalling EUR 89.1 million. With regard to the other non-consolidated companies, the balances as at the date of the balance sheet were as follows: accounts receivable of EUR 12.2 million, reinsurance payable of EUR 33.5 million, funds held by the ceding companies of EUR 63.6 million; we did not hold any funds under reinsurance treaties.

In addition, HDI Asset Management GmbH, which was established in 1999, managed the investments of Hannover Re and some of its subsidiaries.

All other business relations, such as the performance of services on a limited scale or the renting of office premises, are of subordinate importance.

All transactions are conducted on the same basis as between independent and wholly unrelated parties. We gave an account of these transactions with regard to Hannover Re and E+S Rück in our dependent company report.

Reinsurance ceded

The goal of our reinsurance policy is to provide stable reinsurance capacity for our parent company, HDI Group. Our retention is guided by the underwriting guidelines defined for each segment and class of business. Our retrocessionaires are selected in the light of solvency and rating considerations.

We have purchased a per-risk retrocession cover for our facultative property and casualty business which limits our net risk to 10%. All special protection covers serve to protect us in segments and classes of business where we carry a high risk.

In order to minimise the risk of default on our ceded reinsurance, we traditionally spread the business across the largest possible number of retrocessionaires since we would be liable if any of our retrocessionaires were to default on payment.

Accounting and valuation

General principles

All annual financial statements included in the consolidated financial statement were drawn up as at 31 December 1999.

The annual financial statements of all companies were initially drawn up in compliance with the provisions of the respective national laws and then transformed to US GAAP in accordance with standard Group accounting policies.

Investments

Investments were valued in accordance with SFAS 115 (Accounting for Certain Investments in Debt and Equity Securities). The valuation of investments is guided by the intended investment period.

Fixed-income securities classified as held to maturity are valued at purchase costs plus/minus maturity-related appreciation or depreciation. The appreciation or depreciation is derived from the amortised costs.

Fixed-income securities classified as available for sale are valued at fair value. The difference between fair value and amortised cost is booked, net of deferred taxes, to other comprehensive income within stockholders' equity.

Securities whose fair value falls permanently below purchase cost are written down to current value and recognised within the statement of income.

The other investments principally comprise shares in limited partnerships. Valuation is based upon the company's best estimates of fair value. Changes in fair value are included in the statement of income.

WeHaCo Unternehmensbeteiligungs-AG and HANNOVER Finanz GmbH were treated as venture capital investments and assessed at estimated fair value. The change compared to the previous year's value is shown under investment income.

Derivative financial instruments

The company holds derivative financial instruments solely for the purpose of hedging. For this reason, swaps are held for the conversion of interest flows and currencies. Swaps are valued at fair value. Changes in fair value are not included in the statement of income. The current value is shown in the unrealised gains and losses as a separate item under the stockholders' equity. As at year-end the fair value of the swaps totalled EUR 177.0 million (previous year: EUR 233.1 million), and the nominal value of the swaps amounted to EUR 177.4 million (previous year: EUR 222.8 million). In connection with these swaps we provided collateral in the amount of EUR 181.1 million for the year ending 31 December 1999.

The periods to maturity of the swaps vary between one year and fourteen years. Four contracts matured in 1999. The fixed interest rates are between 3.5% and 8.45%. Three instruments have a variable interest rate.

Additionally, the Hannover Re Group's portfolio also contains three forward purchase options on available-for-sale fixed-income securities. The option periods expire on 30 June 2000. The options were assessed at fair value. Changes in fair value are included in the statement of income. The nominal value of the options is EUR 30.0 million. The forward rates are between 98.3% and 100%.

As at year-end the portfolio contained one forward exchange transaction (CAD 19.0 million). Forward exchange transactions are used to support our activities to match the currency of liabilities against assets. The contract was assessed at fair value. Differences in fair value are included in the statement of income. The delivery date of the forward exchange transaction is 14 December 2000.

Securitization of reinsurance risks

The portfolio of investments includes securities whose returns are linked to the occurrence of defined natural catastrophe events. Interest on these securities is calculated using the retrospective interest method.

Real estate

Real estate is divided into real estate for own use and third-party use. Only the real estate in the portfolio which is used to generate income is shown under the investments.

Real estate is valued at cost of acquisition less scheduled and unscheduled depreciation.

Income and expenses from rental agreements are included in the investment income.

Cash equivalents

This item comprises investments with a life of up to three months; they are assessed at fair value.

Accounts receivable and reinsurance payable

Balances in respect of ceding companies or retrocessionaires which include premiums, loss payments, commissions or similar amounts are shown at nominal value. Specific bad debt provisions are made for foreseeable risks.

Split of receivables

<i>Figures in EUR thousand</i>	<i>1999</i>	<i>1998</i>
Receivables from reinsurance business	1 598 731	1 071 182
Bad debt to receivables from reinsurance business	13 210	10 061
Total	1 585 521	1 061 121

Funds held by ceding companies and funds held under reinsurance treaties

These items are assessed at nominal value. If funds held by ceding companies are no longer considered valuable, they are reduced by means of appropriate bad debt provisions.

Reinsurance with a financing character

Insurance contracts which do not satisfy the requirements of SFAS 113 (Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts) have been separated from the technical account. These involve reinsurance treaties under which the risk transfer between the ceding company and the reinsurer is of merely subordinate importance. In the case of these treaties, the collected premiums have no effect on the net income and are shown in the balance sheet as funds held by ceding companies or funds held under reinsurance treaties. Only the fees accruing to the reinsurer are shown as premium income and included in earnings. It was necessary to reclassify only a small number of such reinsurance treaties. Since the vast majority of our treaties satisfy the requirements to which insurance transactions are subject under US GAAP, there was no need to reclassify them.

Deferred acquisition costs

In the case of property and casualty reinsurance, acquisition costs directly connected with the acquisition or renewal of treaties are deferred and amortised in line with the unearned portion of the premiums.

In life and health reinsurance, the capitalised acquisition costs under life and annuity policies with regular premium payments are determined in the light of the period of the contracts, the expected surrenders, the lapse expectancies and the anticipated interest income.

In the case of annuity policies with a single premium payment, these values are determined in relation to the expected policy period or period of annuity payment.

Underwriting assets

The retrocessionaires' portion of the technical provisions are recorded in accordance with the contractual agreements of the underlying reinsurance treaties.

Unearned premiums arise out of the deferral of ceded reinsurance premiums.

Other assets

Tangible assets and intangible assets are shown at cost of acquisition less scheduled depreciation. Scheduled depreciation is determined on the basis of the ordinary useful life. Embedded portfolio values, such as Present Value of Future Profits, resulting from the acquisition of insurance companies are depreciated according to the period of the underlying contracts. The other assets also comprise an escrow account in the amount of USD 50.0 million arising out of the acquisition of Clarendon Insurance Group.

Immaterial items are completely written off in the year of acquisition.

Other assets are shown at nominal value.

Technical provisions

The loss and loss adjustment expense reserves are in principle calculated on the basis of the information supplied by ceding companies. IBNR reserves are also included. The total amount of the reserves corresponds to the "principle of best estimate" under US GAAP. This estimate is based on past experience and estimations of future development.

In one subsegment of financial reinsurance technical provisions were discounted at interest rates of between 5.7% and 8.6%. The interest rates are determined by the contractual agreements. These treaties are discounted over a period of at least four years, which represents the period from inception to expiry of the respective contracts. The discounted amount totals EUR 217.7 million. As at year-end 1999 the discounted provisions amounted to EUR 1,245.5 million.

An Environmental Claims System was set up in 1997 to monitor our overall risk, particularly in the USA. As at year-end 1999 we recorded the following additional provisions on the basis of this data:

<i>Figures in USD million</i>	<i>Gross</i>	<i>Net</i>
Asbestosis	46.7	44.8
Pollution damage	79.3	52.6

Projections and calculations make allowance for all foreseeable risks and are constantly adjusted in line with the latest information. Management believes that the provisions are adequate to cover the ultimate gross cost of losses and loss expenses incurred as at 31 December 1999.

Policy benefits for life and health contracts are established in accordance with the principles set out in SFAS 60. The provisions were determined on the basis of the Group companies' information regarding mortality, interest and lapse rates.

Unearned premiums are geared to the period during which the risk is carried and were established in accordance with the information supplied by ceding companies. In cases where no information was received, the unearned premiums were estimated using suitable methods. Premiums paid for periods subsequent to the date of the balance sheet were deferred from recognition within the statement of income.

Other liabilities

Provisions for pensions are established in accordance with SFAS 87 (Employers' Accounting for Pensions) using the projected benefit obligation method. The basis of the valuation is the estimated future increase in the rate of compensation of the pension beneficiaries. The benefit entitlements are discounted by applying the capital market rate for highest-rated securities.

Minority interests are established in accordance with the shares held by companies outside the Group in the stockholders' equity of the subsidiaries.

Outside capital is shown at the amount repayable.

Loans

In the 1999 financial year Hannover Finance Inc. issued a floating-rate, subordinated debt in the amount of USD 400.0 million with a term of thirty years. The loan may be redeemed prematurely by the issuer no earlier than ten years after launch.

The capitalised issuance costs for this loan total USD 1.8 million and will be amortised over the loan term. The average interest rate in 1999 was 6.22%.

In order to hedge against the risk of interest rate changes associated with this loan, the issuing company purchased an interest rate swap which converts the interest rate from a floating rate to fixed rate, for a period ending commensurate with the first opportunity to redeem the loan. The interest rate arising after allowance is made for the interest rate swap amounted to an annual average rate of 5.89% in 1999.

Surplus debenture (Genussrechtskapital)

Surplus debenture is shown as a liability with the amount repayable.

In 1993 Hannover Re and E+S Rück issued surplus debentures in the amount of EUR 76.7 million at an interest rate of 7.55% and in the amount of EUR 40.9 million at an interest rate of 7.75% respectively, with a term of ten years.

In the event that interest incurred in connection with servicing the surplus debenture should in future no longer be deductible in Germany for the purpose of calculating taxable income, a right of premature repayment exists. Interest payments and repayment of the nominal amounts are dependent on the company's results. In the event of insolvency, the participating rights are serviced before the stockholders.

Stockholders' equity

The stockholders' equity is shown in a separate footnote to the financial statement and is in accordance with SFAS 130 (Reporting Comprehensive Income). The stockholders' equity comprises not only the net income deriving from the statement of income but also the changes in the value of asset and liability items which do not impact the statement of income.

The partially paid-up equity refers almost exclusively to Talanx AG (a wholly-owned subsidiary of HDI) and results from the resolutions of past years regarding capital stock increases.

Currency conversion

Foreign currency items in the individual companies' statements of income are converted into the respective national currency at the average rates of exchange. The individual companies' statements of income prepared in the national currencies are converted into Euro at the average rates of exchange and transferred to the consolidated financial statement. The conversion of foreign currency items in the balance sheets of the individual companies and the transfer of the individual companies' balance sheet items to the consolidated financial statement are effected at the mean rates of exchange on the balance sheet date. In the case of functional currencies, differences arising between the average exchange rate and the year-end rate lead to the establishment of a separate item in the stockholders' equity which is excluded from the statement of income. Differences arising with regard to non-functional currencies are recognized in the statement of income. Functional currencies are defined as those currencies in which investments are effected.

The following key exchange rates were used:

<i>Currency</i>	<i>Mean rate of exchange on the balance sheet date</i>	<i>Average rate of exchange</i>
1 Euro corresponds to:		
USD	1.0027	1.0646
CAD	1.4570	1.5848
AUD	1.5350	1.6606
GBP	0.6205	0.6580
ZAR	6.1753	6.5021
SEK	8.5630	8.8322
MYR	3.8238	4.0477

Deferred taxes

Deferred tax assets and liabilities are booked if timing differences between the values assessed under US GAAP and under the provisions of tax law will offset each other in the future. This treatment applies in principle to most asset and liability items with the exception of the goodwill from the capital consolidation and other permanent differences. Deferred taxes are assessed using the current tax rates. If the tax rates change, appropriate allowance is made in the year in which the change in the tax rate is published.

Deferred taxes at the Group level are booked using the Group tax rate of 53% (previous year: 58%).

Cash flow statement

The cash flow statement is subdivided into cash flows from operating activities, cash flows from investing activities and cash flows from financing activities. The change in cash was determined on the basis of the indirect method.

Segment report

Within the notes on the consolidated financial statement there is a summary of our major underwriting assets and liabilities and of the statement of income broken down into the strategic business segments of property and casualty reinsurance, life and health reinsurance, financial reinsurance and program business.

Estimated amounts

In the consolidated financial statement and the individual companies' financial statements it is to some extent necessary to make estimates and assumptions which affect the assets and liabilities shown in the balance sheet and the disclosure of income and expenses during the reporting period. The actual amounts may diverge from the estimated amounts.

Notes on the consolidated balance sheet

Rating structure of investments

1999 Figures in EUR thousand	AAA	AA	A	BBB	BB	B	C	Other	Total

Other information on the balance sheet

Goodwill

<i>Figures in EUR thousand</i>	<i>1999</i>	<i>1998</i>
Goodwill net as at 1 January	57 900	62 411
Additions	217 727	7 650
Deductions	–	5 990
Amortisation	10 072	6 176
Currency exchange rate differences	–	5
Goodwill net as at 31 December	265 555	57 900

The primary factor here was the goodwill added in the 1999 financial year as a result of the acquisition of Clarendon Insurance Group (EUR 182.9 million). The goodwill will be amortised over 40 years.

Present Value of Future Profits on acquired life reinsurance portfolios

<i>Figures in EUR thousand</i>	<i>1999</i>	<i>1998</i>
Balance as at 1 January	25 450	21 708
Currency exchange rate differences	1 043	-629
	26 493	21 079
Additions	1 382	8 250
Amortisation	4 622	4 400
Currency exchange rate differences	–	521
Balance as at 31 December	23 253	25 450

The period of amortisation on acquired portfolios varies between 5.5 and 15 years and results from the initial consolidation of acquired life insurance companies.

Reconciliation of equity

Authorised capital of EUR 0.8 million is available for the issue of employee shares until 31 August 2002. No resolutions were adopted by the Executive Board in this regard in 1998 or 1999.

In addition, authorised but unissued capital of EUR 20.0 million is available until 1 July 2004.

By a resolution of the Annual General Meeting of Hannover Rückversicherungs-AG adopted on 30 July 1999, the company was authorised until 31 December 2000 to acquire treasury stock of up to 10% of the capital stock existing on the date of the resolution.

The Executive Board of Hannover Rückversicherungs-AG shall propose to the Annual General Meeting on 20 July 2000 that the currently remaining bearer shares be replaced with registered shares. In order to implement this changeover, Hannover Re shall request the registered shareholders to pay the outstanding capital on the common stock in the amount of EUR 12.8 million by 31 May 2000 and to admit these securities for trading on the stock exchange.

Taxes

Due to the changes arising as a consequence of the Tax Relief Act in Germany, the rate of taxation underlying the calculation of the deferred taxes for the German companies and for adjustments within the Group was reduced in the year under review from 58% to 53%.

<i>Figures in EUR thousand</i>	<i>1999</i>	<i>1998</i>
Taxes on income	97 116	46 067
Other tax expenditure	2 167	513
Change in deferred taxes	-19 016	194 982
Total	80 267	241 562

The reduction in the rate of taxation used to calculate the deferred taxes resulted in a large release in the year under review.

The following table illustrates the reconciliation of the expected tax burden with the reported tax burden:

<i>Figures in EUR thousand</i>	<i>1999</i>	<i>1998</i>
Expected tax burden	173 724	247 161
Tax levied on distributions	-7 986	-1 955
Reduction of deferred taxes	-79 738	–
Taxation differences affecting foreign subsidiaries	-42 700	-25 707
Other	36 967	22 063
Total	80 267	241 562

The deferred tax assets and deferred tax liabilities of all Group companies are summarised in the following table:

<i>Figures in EUR thousand</i>	<i>1999</i>	<i>1998</i>
Deferred tax assets		
Tax loss carry-forwards	42 338	2 277
Valuation differences arising out of leasing agreements	35 530	–
Valuation differences arising out of property and casualty reinsurance	88 031	6 297
Valuation differences arising out of the portfolio of life and health reinsurance	85 369	71 630
Other technical revaluations	4 565	–
Valuation differences relating to investments and other valuation differences	14 657	752
Other revaluations	34 816	8 393
Total	305 306	89 349
Deferred tax liabilities		
Valuation differences arising out of leasing agreements	25 213	–
Valuation differences arising out of property and casualty reinsurance	15 162	12 615
Change in the equalisation reserve	542 579	546 394
Valuation differences arising out of the portfolio of life and health reinsurance	251 826	190 091
Valuation differences relating to investments	416 156	477 519
Other revaluations	39 403	34 683
Total	1 290 339	1 261 302
Deferred tax liabilities	985 033	1 171 953

The changes are influenced by the initial consolidation of Clarendon Insurance Group and the effects of tax reform in Germany during the year.

Other information

Staff

The average number of staff at the companies included in the consolidated financial statement of the Hannover Re Group was 1,516 (previous year: 1,081). Of this number, 696 were employed in Germany in the year under review. The other staff were employed at the consolidated Group companies abroad.

Provisions for pensions

Provisions for pensions are established in accordance with actuarial principles and are based upon the commitments made by the Hannover Re Group for retirement, disability and widows' benefits. The amount of the commitments is determined according to length of service and salary level. The calculation of the provisions for pensions is based upon the following assumptions:

- Discount rate: 6%
- Rate of compensation increase: 3%

The commitments to employees in Germany comprise commitments financed by the Group companies. For the years ending 1999 and 1998 the pension plans remain unfunded.

Provisions for pensions in accordance with SFAS 87 and 132

<i>Figures in EUR thousand</i>	<i>1999</i>	<i>1998</i>
Change in benefit obligation		
Projected benefit obligation at the beginning of the period	34 926	34 514
Service cost	1 973	2 113
Interest cost	2 085	2 062
Actuarial gain / loss in the reporting year	-756	-2 907
Benefits paid during the year	-911	-855
	37 317	34 927
Funded status of plan		
Unrecognised net obligation	1 931	2 388
Unrecognised actuarial loss	769	1 538
	2 700	3 926
Accrued pension liability	34 617	31 001
Additional minimum liability	–	570
Net periodic pension cost of the year		
Service cost	1 973	2 113
Interest cost	2 085	2 062
Recognised net actuarial loss	13	95
Amortisation of net obligation	457	457
Total	4 528	5 297

Emoluments received by the management boards of the parent company and loans granted to them

Emoluments of EUR 189,000 were received by the Supervisory Board and EUR 2,816,000 by the Executive Board in the year under review. The emoluments of former board members and their surviving dependants amounted to EUR 591,000, and a liability of EUR 7,616,000 was shown, for the year-end.

The following loans which are secured on mortgages or by land charges were granted to board members:

<i>Figures in EUR thousand</i>	<i>Position as at 1.1.1999</i>	<i>Addition</i>	<i>Repayment</i>	<i>Re- classification</i>	<i>Position as at 31.12.1999</i>	<i>Interest rate %</i>
Supervisory Board	50	–	50	–	–	5.5
Executive Board	140	–	140	–	–	5.5

All loans were repaid in 1999.

Introduction of the Euro

The Euro was introduced as a common currency in most European Union countries with effect from 1 January 1999. Our annual report has been compiled in Euro for the first time. All accounting systems of the Group companies in Germany have already been converted to the Euro.

Year 2000

The turn of the millennium did not cause any problems within the Group. All costs associated with the transition were recognised in the statement of income.

Events subsequent to conclusion of the financial year

At the beginning of the year 2000 a Group company acquired Redland Insurance Company, Iowa/USA, for USD 10.0 million.

The Executive Board also decided to call the unpaid common stock of Hannover Rückversicherungs-AG by 31 May 2000.

In the first quarter of the current financial year the aircraft leasing agreements entered into by subsidiaries of Hannover Finance Inc. were terminated.

Letters of credit

As security for our technical liabilities, various financial institutions have furnished sureties for our company in the form of letters of credit. The total amount of the letters of credit as at the balance sheet date was EUR 726.8 million (previous year: EUR 647.0 million).

Master trust

As security for our technical liabilities to our US clients, we have established a master trust in the USA. As at the balance sheet date this master trust amounted to EUR 499.1 million (previous year: EUR 392.4 million). The securities held in the master trust are shown as available-for-sale investments.

Contingent liabilities

No contingent liabilities that have not already been included in the balance sheet exist which could significantly influence future business results.

Certification by the Independent Auditors

We audited the consolidated financial statements of Hannover Rückversicherungs-Aktiengesellschaft for the business year from 1 January to 31 December 1999, comprising the consolidated balance sheet, the consolidated statement of income, the consolidated cash flow statement, the consolidated statement of changes in stockholders' equity and the consolidated annex. The preparation and contents of these consolidated financial statements in accordance with US GAAP (United States Generally Accepted Accounting Principles) are the responsibility of the company's Management. Our responsibility is to express an opinion on these consolidated financial statements based on our audit.

We conducted our audit of the consolidated financial statements in accordance with German auditing rules and in compliance with the generally accepted auditing standards set out by the Institut der Wirtschaftsprüfer (IDW = German Institute of Certified Public Accountants). Those standards require that we plan and perform the audit such as to assess with reasonable certainty whether the annual financial statements are free of material misstatements. The audit includes an assessment, on the basis of spot tests, of the evidence supporting the amounts and disclosures in the consolidated financial statement. The audit also includes assessing the accounting principles used and the significant estimates made by the Management, as well as evaluating the overall presentation of the consolidated financial statement. We believe that our audit provides a reasonable basis for our opinion.

In our opinion the consolidated financial statements give a true and fair view of the Group's assets, liabilities, financial position and net income as well as its cash flows during the business year in accordance with United States Generally Accepted Accounting Principles.

Our audit, which also encompassed the Group report prepared by the Management for the business year from 1 January to 31 December 1999, has not led to any reservations.

On the whole the Group management report provides a suitable understanding of the Group's position and suitably presents the risks of future development.

Glossary

Accumulation loss: sum of several individual losses incurred by various policyholders as a result of the same loss event. This may lead to a higher loss for the direct insurer or reinsurer if several affected policyholders are insured by the said company.

Alternative risk financing: use of the capacity available on the capital markets to cover insurance risks, e.g. through the securitisation of natural catastrophe risks, if such risks are no longer fully insurable by the insurance and reinsurance industries.

Block assumption transactions (BAT): quota share reinsurance treaties on our clients' life or health insurance business, by means of which it is possible, inter alia, for our clients to realise in advance the future profits inherent in the portfolio so as to be able to efficiently ensure the attainment of corporate objectives, e.g. in the areas of financial or solvency policy.

Capital, reserves and technical provisions: an insurer's capital and reserves, also including the provisions committed to technical business and the fluctuation reserve. Total maximum funds available to offset liabilities.

Cedant: direct insurer or reinsurer, which passes on (cedes) shares of its insured or reinsured risks to a reinsurer in exchange for premium.

Claims and claims expenses: sum total of paid claims and provisions for loss events which occurred in the business year; this item also includes the result of the run-off of the provisions for loss events from previous years; in each case, after the deduction of own reinsurance cessions.

Direct insurer (also: primary insurer): company which accepts risks in exchange for an insurance premium, and which has a direct contractual relationship to the policyholder (private individual, company, organisation).

Discounting of loss reserves: determination of the present value of future payments through multiplication by the corresponding discount rate. In the case of the loss reserves this is necessary because of the new profit calculation methods for tax purposes applicable to German joint-stock corporations.

Dread Disease coverages: riders on the basis of which parts of the sum insured – which would otherwise only become payable on occurrence of death – are paid out in the event of previously defined severe illnesses.

Earnings retention: non-distribution of a company's profits leading to different treatment for tax purposes than if profits were distributed.

Economic loss: total loss incurred by the affected economy as a whole following the occurrence of a loss. The economic loss must be distinguished from the insured loss. The insured loss reflects the total amount of losses covered by the insurance industry (direct insurers and reinsurers).

Excess of loss treaty: cf. → Non-proportional reinsurance

Expense ratio: administrative expenses in relation to the net premium written.

Exposure: level of danger inherent in a risk or portfolio of risks; this constitutes the basis for premium calculations in reinsurance.

Facultative reinsurance: specially negotiated participation on the part of the reinsurer in a particular individual risk assumed by the direct insurer. This is in contrast to → obligatory (also: treaty) reinsurance.

Financial reinsurance: reinsurance with limited potential for profits and losses; the primary objective is to strive for risk equalisation over time and to stabilise the → cedant's balance sheet.

Fluctuation reserve: provision for the equalisation of substantial fluctuations in the claims experience of individual classes of business over several years.

Funds held by ceding companies/funds held under reinsurance treaties: collateral provided to cover insurance liabilities which a (re-)insurer retains from the liquid funds which it is to pay to a reinsurer under a reinsurance treaty. In this case, the retaining company shows funds held under a reinsurance treaty, while the company furnishing the collateral shows funds held by a ceding company.

Gross/Retro/Net: gross items constitute the relevant sum total deriving from the acceptance of direct insurance policies or reinsurance treaties; retro items constitute the relevant sum total deriving from own reinsurance cessions. The difference is the corresponding net item (gross – retro = net, also: for own account).

Hybrid capital: debt structure characterised by certain characteristics of both debt and equity.

IBNR (Incurred but not reported) reserve: provision for claims which have already occurred but which have not yet been reported.

Life and health (re-)insurance: collective term for the classes of business concerned with the insurance of persons, i.e. life, health and personal accident insurance.

LOC (Letter of Credit): bank guarantee; at the request of the guaranteed party, the bank undertakes to render payment to the said party up to the amount specified in the LOC. This method of providing collateral in reinsurance business is typically found in the USA, for example.

Loss ratio: percentage share of loss expenditure in the → retention relative to the net premiums earned.

Major loss: loss which has special significance for the direct insurer or reinsurer due to the amount involved; it is defined as a major loss in accordance with a fixed loss amount or other criteria.

Matching currency cover: coverage of technical liabilities in foreign currencies by means of corresponding investments in the same currency in order to avoid exchange-rate risks.

Net: cf. → Gross/Retro/Net

Non-proportional reinsurance: reinsurance treaty under which the reinsurer assumes the loss expenditure in excess of a particular amount (→ priority; e.g. under an excess of loss treaty). This is in contrast to → proportional reinsurance.

Obligatory reinsurance (also: treaty reinsurance): reinsurance treaty under which the reinsurer participates in a → cedant's total, precisely defined insurance portfolio. This is in contrast to → facultative reinsurance.

Policy benefits for life and health contracts: value arrived at using mathematical methods for future liabilities (present value of future liabilities minus present value of future incoming premiums), primarily in life and health insurance.

Portfolio: all risks assumed by a direct insurer or reinsurer on an overall basis or in a defined sub-segment (e.g. class of business, country).

Premium: agreed remuneration for the risks accepted from an insurance company. Unlike the earned premiums, the written premiums are not deferred.

Priority: direct insurer's loss amount stipulated under → non-proportional reinsurance treaties; if this amount is exceeded, the reinsurer becomes liable to pay. The priority may refer to an individual loss, an → accumulation loss or the total of all annual losses.

Program business: a speciality of the US insurance market written by insurers working in very close cooperation with reinsurers and highly specialised managing general agents. The segment is typically focused on niche and non-standard coverages and hard-to-place risks.

Property and casualty (re-)insurance: collective term for all classes of business which in the event of a claim reimburse only the incurred loss, not a fixed sum insured (as is the case in life and personal accident insurance, for example). This principle applies in all classes of property and liability insurance.

Proportional reinsurance: reinsurance treaties on the basis of which shares in a risk or → portfolio are reinsured under the prevailing original conditions. → Premiums and losses are shared proportionately on a pro-rata basis. This is in contrast to → non-proportional reinsurance.

Provision: liability item as at the balance sheet date to discharge obligations which exist but whose extent and / or due date is / are not known. Technical provisions, for example, are for claims which have already occurred but which have not yet been settled, or have only been partially settled (= provision for outstanding claims, abbreviated to: claims provision).

Rate: percentage rate of the reinsured portfolio which is to be paid to the reinsurer as reinsurance premium under a → non-proportional reinsurance treaty.

Reinsurer: company which accepts risks or portfolio segments from a → direct insurer or another reinsurer in exchange for an agreed premium.

Reserve ratio: ratio of (gross or net) technical provisions to the (gross or net) premiums.

Retention: the part of the accepted risks which an insurer/reinsurer does not reinsure, i.e. shows as → net. (Retention ratio: percentage share of the retention relative to the gross premiums written).

Retro: cf. → Gross / Retro / Net

Retrocession: ceding of risks or shares in risks which have been reinsured. Retrocessions are ceded to other reinsurers in exchange for a pro-rata or separately calculated premium.

Securitisation instruments: innovative instruments for transferring reinsurance business to the capital markets with the goal of refinancing or placing insurance risks.

Technical result: the balance of income and expenditure allocated to the insurance business and shown in the technical statement of income (after additional allowance is made for the allocation to / withdrawal from the fluctuation reserve: net technical result).

Unearned premiums: premiums written in a financial year which are to be allocated to the following period on an accrual basis. This item is used to defer written premiums.

US GAAP (United States Generally Accepted Accounting Principles): internationally recognised US accounting principles. Not all the provisions which together constitute US GAAP have been codified. US GAAP comprises not only defined written statements but also, for example, standard accounting practices in specific industries.

Volatility: measure of the variability of stock prices, interest rates and exchange rates. Standard practice is to measure the volatility of a stock price by calculating the standard deviations of relative price differences.
